#### 1.0 INTRODUCTION

BETA Group Inc. (BETA) has prepared this Immediate Response Action (IRA) Status and Remedial Monitoring Report (RMR) No. 56 that addresses a release of hazardous materials related to fire-fighting foams and attributed to the former Barnstable County Fire and Rescue Training facility located at 155 South Flint Rock Road in Barnstable, Massachusetts (the FTA or facility). This document has been prepared and is being submitted to the Massachusetts Department of Environmental Protection (MassDEP) – Bureau of Waste Site Cleanup (BWSC) in response to the detection of elevated concentrations of per- and polyfluoroalkyl substances (PFAS), including perfluorooctane sulfonate (PFOS) and perfluorooctanoic acid (PFOA), in soil and groundwater at the facility and in adjacent areas, in particular to the east, southeast of the facility. This report provides monthly IRA status reporting on the groundwater pumping and treatment system at the Site for the July 2021 reporting period. In addition, this status report describes the activities and results of the Site-wide groundwater monitoring conducted in July 2021.

This (IRA) Status and Remedial Monitoring Report (RMR) No. 56 is being submitted to MassDEP as an attachment to the BWSC 105 Immediate Response Action (IRA) and BWSC 105A and 105B IRA Remedial Monitoring Report Transmittal Forms. Completed copies of these forms prior to electronic signature are included in Appendix A.

As current owners of the FTA, Barnstable County, as represented by the Barnstable County Commissioners, have been named as the Potentially Responsible Party (PRP) for this release. The contact person for the Disposal Site and release is:

Steve Tebo, Asset and Infrastructure Manager Barnstable County 3195 Main Street Barnstable, MA 02630 Telephone:508-375-6643Email:stebo@barnstablecounty.org

BETA is performing MCP Response Actions on behalf of the Barnstable County Commissioners. The Licensed Site Professional (LSP) overseeing Response Actions for this release is:

Roger Thibault, P.E., LSP No. 1443 BETA Group Inc. 701 George Washington Highway Telephone:401-333-2382Email:rthibault@beta-inc.com

#### 2.0 GENERAL DISPOSAL SITE INFORMATION

#### 2.1 PROPERTY AND SITE DESCRIPTION

The former Barnstable County Fire and Rescue Training FTA (FTA or facility) is located on South Flint Rock Road in the Town of Barnstable. It appears on the United States Geological Survey (USGS) Topographic Quadrangle – Hyannis, Massachusetts -Figure 1 – Site Location map, prepared from a portion of the referenced USGS Topographic Quadrangle map. The Site is currently zoned for industrial use.

For the purposes of this and future MCP submittals, the property on which the FTA is located will be referred to as the FTA or facility. FTA or facility will also refer to the structures, land and former functions of the FTA.

In accordance with the MCP definitions, where contamination attributable to the PFAS releases associated with firefighting foams and training on the FTA have come to be located will be referred to as the Disposal Site or Site.

The 6.2 acre FTA is improved by three primary buildings: an auxiliary fire station and training building (with two classrooms, administrative offices, and two apparatus bays), a classroom building, and two, connected "burn buildings" (formerly used for live fire suppression training), along with several sheds and outbuildings formerly used for fire and rescue training activities. Refer to Figure 2. In 2019, a wood framed house-like structure formerly used for smoke training was demolished. At the time of submittal of this status report no. 56, the former live fire suppression training buildings had been demolished. The FTA is secured by chain link fencing and a locked gate. The FTA is listed on the Town of Barnstable Assessor's on-line records as Map 313, Lot 007. The current owner-of-record is the County of Barnstable, who acquired the facility from the Town of Barnstable in 1983 by deed recorded June 3, 1983, Barnstable Registry of Deeds, Book 3759, Page 39. Utilities servicing the FTA include municipal water, an underground septic system, aboveground electricity and telecommunications.

The FTA was first constructed on land donated to the Town of Barnstable by the Cobb Trust in 1955. The FTA had been used for public safety training since the 1950's. The FTA was formerly used for public safety training by fire departments and fire districts from throughout Barnstable County, fire departments outside of Barnstable County, and other public and private institutions. Live fire training using firefighting foams, including aqueous film forming foams (AFFF), was conducted at the FTA for decades by fire districts and departments that used their own foam brought to the FTA in the apparatus of the organization participating in the training. Foam training exercises at the FTA ceased in 2009 according to FTA officials. Water training activities ceased in June 2019. The FTA periodically hosts classroom training sessions, although these session are being phased out.

Land surrounding the FTA is primarily undeveloped, wooded land within a public water supply protection area. Flintrock Pond occupies approximately 6 acres directly to the west of the FTA. Several public water supply wells and their related facilities are located to the east, southeast, and west of the FTA.

At this time, the preliminary MCP Disposal Site (the Site) associated with RTN 4-26179 is considered to comprise approximately the majority of the FTA, the westerly adjacent Flintrock Pond, and a large woodland area to the southeast of the FTA, approaching Mary Dunn Pond.

The southeastern portion of the Site includes land owned by the Town of Barnstable, which is crossed by two electric power transmission lines running presumably within easements. Private industrial properties and related structures are located approximately 500 to 1,000 feet south of the Site. The Barnstable Municipal Airport is located to the west (runway 15 – 33) and south of the Site and the FTA.

The nearest residential properties are located approximately ¼ mile to the north of the Site. Based on 2010 U.S. Census data, the residential population located within a ½ mile radius of the Site is estimated to be less than 150 people. There are no known Institutions located within 500 feet of the Site. The FTA currently has approximately 2 to 3 workers who may be considered full-time. During training activities, which now consist of periodic classroom training only, 20 to 30 fire fighters or rescue personnel and training personnel may temporarily use the facility. The municipal well pumping facilities referenced above (not part of the FTA) are not staffed full-time.

#### 2.2 LATITUDE AND LONGITUDE / UNIVERSAL TRANSVERSE MERCATOR'S

The coordinates for the Site are shown below. For simplicity, these coordinates are for the southerly end of the FTA.

Latitude/Longitude		41° 40′ 41.53″ 70° 17′ 7.82″
UTM Coordinates	0	393,002 4,614,847

#### 2.3 ENVIRONMENTAL SETTING AND SENSITIVE RECEPTORS

BETA's review of the Massachusetts GIS Priority Resources (21E) mapping (Figure 4) revealed that the Site is located within a Zone II Public Water Supply Protection Area and a Medium-Yield Sole Source Aquifer. The FTA is situated to the west and most likely upgradient of the Mary Dunn public water supply wells 1, 2, and 3 under pumping conditions. Mary Dunn Wells 1, 2, and 3, owned by the Town of Barnstable through the Hyannis Water Supply Division (HWSD) of the Barnstable Department of Public Works (DPW), are located within the preliminary Disposal Site boundary due to the detections of PFAS in the groundwater at those wells. There are no known private potable water wells located within 500 feet of the Site.

Mary Dunn Well 3 (MD-3), which is the nearest public water supply well to the facility, has been documented to pump at an average rate of 380 to 450 gallons per minute (gpm). Mary Dunn Wells 1 and 2 (MD-1 and MD-2) are located approximately 1600 feet and 1800 feet, respectively, southwest of the FTA. These wells have been reported to have been pumped at rates of 400 gpm, each. Airport Well 1, also owned by HWSD, is located further to the southeast of the Site, south of Mary Dunn Pond. Two other public water supply wells, identified as Barnstable Fire District (BFD) wells BFD-2 and BFD-5, are located to the west and most likely upgradient of the Site. The BFD wells are not operated by or part of the Hyannis Water System.

According to the USGS Topographic Quadrangle – Hyannis, Massachusetts, elevations at the Site are approximately 30 to 50 feet above mean sea level (MSL). Topography of the Site can be categorized as generally flat with slight to moderate slopes downward to the west and southeast, toward Flintrock Pond and Mary Dunn Pond, respectively.

The nearest surface water bodies to the Site are Flintrock Pond and an unnamed Pond; Flintrock Pond is located west adjacent to the FTA and the unnamed Pond is located northeast adjacent to the FTA (as depicted in Figures 2 and 3). A portion of Flintrock Pond is located within the preliminary MCP Disposal Site Boundary based on the detection of PFAS in sediment and surface water. There are no streams or wetlands located at the Site.

#### 2.4 MASSDEP METHOD 1 CATEGORIES

#### 2.4.1 GROUND WATER CATEGORY

As noted, the Site is located within a Zone II Public Water Supply Protection Area and a Medium-Yield Sole Source Aquifer.

Therefore, MCP Method 1 Ground Water Category 1 (GW-1) applies to the Site. Groundwater at the Site is also categorized as Method 1 GW-2 because groundwater has been measured at depths less than 15 feet below grade and an occupied building is located within the FTA facility.

All ground waters within the Commonwealth are considered a potential source of discharge to surface waters and shall be categorized, at a minimum, as Method 1 GW-3. Therefore, the applicable Method 1 Ground Water Categories for the Site are GW-1, GW-2 and GW-3.

#### 2.4.2 SOIL CATEGORY

Soil categorization is based upon the type of human receptor and three potential exposure criteria: frequency of use, intensity of use, and accessibility of soil. The FTA portion of the Site is occupied by a former fire and rescue training facility. Based on the nature of the facility, children are assumed to be "not present." Adults who work at the site as staff members are assumed to be present at "high frequency." Impacted soils have been identified beneath unpaved areas at depths ranging from approximately less than 3 to 15 feet below the ground surface. Therefore, impacted soils at the FTA are considered "potentially accessible."

Only groundwater impacts at significant depths below the ground surface have been identified at the remainder of the Site (outside of the FTA), which consists of undeveloped, industrially zoned land, a portion of a utility easement, and three unmanned public water supply well stations.

Intensity of use in regard to soil disturbance in the release area for adults at the Site is considered "high" because the area of impact at the FTA could potentially be disturbed during Site activities. However, former on-Site training activities were of relatively short duration with potential high intensity use. Current Site maintenance-related activities are similar in terms of duration and potential intensity. Therefore, for current Site uses, soils at the Site are categorized as Soil Category S-2. The applicable Soil Categories for current Site uses have been identified as S-2/GW-1, S-2/GW-2 and S-2/GW-3.

The applicable Soil Categories for unrestricted future Site uses are S-1/GW-1, S-1/GW-2 and S-1/GW-3.

#### 3.0 DISPOSAL SITE HISTORY AND OVERVIEW

The Site has historically been the subject of four MassDEP RTNs: 4-190, 4-11707, 4-20021, and 4-26179. This IRA Plan Modification is being submitted for RTN 4-26179 only. The original RTN, 4-190, is being managed separately; closure has been achieved for the remaining two RTNs.

#### 3.1 RELEASE HISTORY AND DESCRIPTION - RTN 4-26179 (PFAS RELEASE)

In May 2012, USEPA issued their final rule "Revisions to the Unregulated Contaminant Monitoring Rule (UCMR3) for Public Water Systems," which was a national sampling mandate for "emerging contaminants" in public water supplies. The required sampling list included several PFAS compounds, including but not limited to PFOS and PFOA. In November 2013, samples were collected from Mary Dunn supply wells MD-1, MD-2 and MD-3 and analyzed for PFAS.

At the time of the testing, the US EPA Provisional Health Advisory (HA) was 0.20 micrograms per liter (µg/L) for PFOS. Analytical results revealed evidence of PFOS contamination in all three wells sampled. MD-1 and MD-2 were temporarily removed from service. MD-3 was apparently not in use at that time. A treatment system that utilizes granular activated carbon (GAC) was later implemented for MD-1 and MD-2 [July 2015] by the Hyannis Water Department. In 2016, GAC treatment was also implemented for MD-3. [See below].

In November 2013, Barnstable County personnel also collected soil and groundwater samples from the FTA property, located approximately 1,000 feet west of the Mary Dunn wells, and submitted them for laboratory analysis of PFAS. Groundwater analytical results revealed that FTA groundwater was impacted by PFOS and MassDEP was subsequently notified.

PFOS was also detected in soil at the FTA and in surface water and sediment within the adjacent Flintrock Pond. As summarized in the Notice of Responsibility (NOR) issued by MassDEP on August 4, 2016 (see below), based on the detected PFAS concentrations in soil and groundwater at the FTA and the inferred groundwater flow direction being to the southeast (toward the Mary Dunn wells), MassDEP determined that the releases of PFAS from the use of AFFF at the FTA is a source of PFAS detected in the Mary Dunn wells.

As a voluntary measure, Barnstable County refurbished the former perchlorate pump and treat system located at the FTA to help remediate and contain the PFOS apparently migrating from the facility. The groundwater pumping and treatment system (GWPTS) was re-started using granular activated carbon (GAC) in the former perchlorate treatment vessels for treatment in July 2015. The system utilizes a groundwater recovery well, PRW-4, located approximately 800 feet southeast of the FTA. The groundwater treatment system (GWTS) itself is located in a structure on the FTA grounds.

In August 2015, Barnstable County funded a more detailed hydrogeological assessment, continued implementation of a groundwater pump and treat system to capture PFOS upgradient of the Mary Dunn wells, and additional assessment and immediate response actions. The Cape Cod Commission evaluated subsurface soil and groundwater conditions at the FTA facility as part of the IRA assessment activities. The soil results indicated a broad area of PFOS contamination throughout the subsurface. The highest PFOS concentrations were detected near the southwestern corner of the FTA, a location subsequently referred to as the hot spot.

Groundwater analytical results from the 2015 assessment revealed PFOS contamination ranging from less than 0.070  $\mu$ g/L (the current US EPA HA) to over 4.0  $\mu$ g/L. The groundwater samples were collected from monitoring wells across the area between the FTA and the Mary Dunn wells. Like the soil results, the highest PFOS concentrations were detected near the southwestern corner of the FTA.

In May 2016, US EPA revised/lowered its HA for PFAS from 0.20 µg/L of PFOS and PFOA to 0.070 µg/L for either compound or the total of the two. EPA noted that the HA was for drinking water exposures only. In response to the lowered HA PFAS concentrations, on August 4, 2016, MassDEP issued a Notice of Responsibility (NOR) to Barnstable County and required submittal of an Immediate Response Action (IRA) Plan no later than September 15, 2016. MassDEP requested that the Site owner evaluate potential Imminent Hazards relative to downgradient public and private water supply wells.

MassDEP indicated that this evaluation should include identification of all nearby public and private water supply wells, review of any existing analytical data for those wells, and sampling and analysis of any nearby wells that have not been sampled for PFAS. MassDEP also stated that the IRA Plan should include measures to prevent, eliminate, and/or abate any hazards associated with the consumption of drinking water impacted by PFAS above the HA level of 0.070 ug/L.

MassDEP also required, as part of the IRA, activities to reduce the mass of PFAS at the FTA and the concentrations of PFAS in groundwater migrating from the FTA facility, such as excavating the soil hot spot and expanding the existing groundwater treatment system to decrease the mass of PFAS in groundwater.

On September 27, 2016, on behalf of Barnstable County, the Cape Cod Commission submitted an IRA Plan to MassDEP to address the PFOS/PFOA impacts.

The IRA Plan included an evaluation of imminent hazards to downgradient public and private water supplies, specific plans for a Hot Spot removal action, and plans for an interim expansion of the existing groundwater pump and treatment system.

The proposed IRA to address the soil Hot Spot was to excavate up to 200 cubic yards from a 400 square foot area for off-Site disposal. The Hot Spot soil was removed in January 2017, reducing the primary source of PFOS contamination leaching into groundwater. However, post-removal grading and settling of the backfill in the Hot Spot area left it prone to infiltration of runoff from the southern portion of the FTA.

Between December 2016 and February 2018, the Cape Cod Commission submitted 15 IRA Status and Remedial Monitoring Reports (RMRs) to MassDEP for the PFAS release. The RMRs addressed the FTA GWPTS, which recovers and treats approximately 20,000 to 50,000 gallons per day (gpd) of groundwater from well PRW-4. The Site groundwater pump and treat system is working to reduce PFAS concentrations in the aquifer before it reaches the Mary Dunn municipal wells and treatment systems. Refer to Section 3.2 for further information regarding the on-Site GWPTS.

The Mary Dunn wells are equipped with GAC treatment systems to remove PFAS. The Mary Dunn wells as the well as the GAC treatment systems are operated by SUEZ North America under contract with the HWSD. The GAC treatment of the Mary Dunn wells is actively preventing a potential Imminent Hazard to the Hyannis community by removing the PFAS compounds from the water supply. A Settlement Agreement between the Town of Barnstable and Barnstable County requires the County to fund a portion of the costs associated with operating the Mary Dunn wells treatment systems as well as a portion of the capital costs to install the GAC systems. Timely exchange of pumping and performance data related to the treatment of the Mary Dunn well water supplies to verify effectiveness of the IRA is noted in the Settlement Agreement between the parties.

On behalf of Barnstable County, BETA has submitted IRA Status reports and RMRs since March 2018. IRA Status and RMR reports have been submitted monthly since December 13, 2016. As detailed in recent IRA Status and RMR reports, including this report, groundwater monitoring data for locations across the Disposal Site confirm that elevated PFAS concentrations are still present in Site groundwater. Analytical data from select monitoring wells indicate that PFAS concentrations in groundwater sampled in the former Hot Spot area have significantly decreased (following the Phase 1 stormwater improvements repair of the cap under the June 28, 2018 IRA Plan Modification); PFAS concentrations remain stable in groundwater sampled from wells east of the FTA; and PFAS concentrations remain elevated in groundwater sampled from within the area southeast of the FTA between the facility and the Mary Dunn wells. See Section 4.3 for the most recent (July 2021) groundwater monitoring data.

#### 3.2 GROUNDWATER PUMP AND TREAT SYSTEMS

Response actions to address the early 1990s petroleum releases and the later detection of perchlorate included extensive subsurface assessment including installation of a significant network of monitoring wells.

In addition, to help remediate and control migration from the petroleum and perchlorate releases, in 1998 and 2007, respectively, response actions included the installation, upgrade, and/or renovation of a GWPTS at the Site. In July 2015 the decommissioned GWTS, formerly used to treat for perchlorate, was renovated and re-started to help remediate and contain the PFAS migration from the FTA; see below. The operational GWPTS was later noted in the NOR issued by MassDEP in August 2016 as part of the on-going IRAs. The NOR also requested that Barnstable County install additional recovery wells or increase the groundwater recovery rate to increase PFAS removal; see discussion of GWTS# 2 below.

The approximate locations of key components of the GWPTS that are located on the FTA are shown on Figure 2 – Site Plan Detail. The location of the operating recovery well, PRW-4, and the approximate route of the force mains (two, 2-inch polyethylene pipes) are shown on Figure 3 – Site Plan.

#### <u>GWTS # 1</u>

In July 2015, the primary influent/recovery well pump installed in recovery well PRW-4 was repaired, a new variable frequency drive (VFD) unit pump was installed in the treatment system, and all accompanying electrical components were evaluated and repaired. The system was restarted in July 2015 upon the installation of 1500 pounds (lbs.) of aqueous phase GAC (Filtrasorb 400 virgin GAC) into each of the two, existing Siemens treatment vessels. The "capture zone" of PRW-4 was reportedly estimated to be 200 ft. at 40 gallons per minute (gpm). Groundwater is pumped from recovery well PRW-4, through two, 2-inch dia. HDPE, eight-hundred-foot force mains to the treatment building on the FTA; see Figures 2 and 3.

The groundwater is discharged to an equalization tank, then filtered through a 5–10-micron size bag filter, and pumped through the two (in series) GAC vessels. The treated groundwater is discharged by gravity to several large recharge chambers in a north-central location of the FTA, upgradient of the recovery well and approximately cross-gradient of the highest levels of PFAS contamination detected at the FTA property. See Fig. 2 for the location of the recharge basins. As appropriate to prevent breakthrough of the PFAS6 compounds, the GAC is periodically changed out.

#### <u>GWTS # 2</u>

As noted, the NOR also requested that Barnstable County increase the groundwater recovery and treatment rate to increase PFAS removal from the aquifer. In November 2019, a second, supplemental treatment system was installed, designated as GWTS#2, to treat water from the existing recovery well and better use its extraction capacity. One of the two force mains was re-piped and connected via hose and hard piping to GWTS#2. The system is contained in a mobile structure (former shipping container) and is designed to treat PFAS-impacted groundwater (via adsorption technology with liquid phase granular activated carbon) at a target flow rate of approximately 30 gpm.

Since the inception of treatment for PFAS in 2015, the spent GAC is collected by the supplier, Calgon Carbon Corp., during the changeout procedure and transported to their facility for standard thermal regeneration or destruction. As noted above, the FTA GWPTS uses virgin GAC supplied by Calgon.

Currently, Groundwater Treatment Technologies, LLC (GWTT) is contracted by Barnstable County to provide O&M of the GWTS, including but not limited to bag filter checks and replacements, VFD pump monitoring, carbon vessel backwashing, and GAC replacement oversight.

Additionally, BETA collects monthly samples for PFAS from both systems to check their treatment performance (See section 4.1).

#### 3.3 PHASE I INITIAL SITE INVESTIGATION AND TIER CLASSIFICATION

In May 2018, a Phase I Initial Site Investigation (ISI) Report and Tier Classification Submittal was submitted to MassDEP by BETA (formerly Nover-Armstrong Associates) on behalf of Barnstable County in response to the discovery of concentrations of PFAS compounds in soil and groundwater exceeding applicable USEPA Health Advisory (HA) levels. The Phase I ISI confirmed that the primary contaminant of concern is PFOS and, to a lesser extent, PFOA.

Based on the compiled Phase I Initial Site Investigation data, BETA opined in the Phase I report that continuation of the IRA activities and additional assessment and, potentially, additional remedial Response Actions are warranted at the Disposal Site.

A Phase II Comprehensive Site Assessment Conceptual Scope of Work (SOW) was submitted with the Phase I ISI outlining the scope, nature of investigation, and sample programs proposed to characterize the risk of harm posed to health, safety, public welfare, and the environment (for regulatory closure). The Phase II SOW proposed additional remedial and/or response actions such as continued monitoring of the Site groundwater conditions, potential soil removal or modifications to the existing groundwater treatment system to be implemented in the near future. At a later date, MassDEP indicated that a formal Phase II Comprehensive Site Assessment SOW was required in addition to the Conceptual SOW.

A Tier Classification was submitted to MassDEP concurrently with the Phase I Report. Based on the need to continue remedial actions as IRAs under the current IRA Plan, and on the continuing need to abate a potential Imminent Hazard condition related to impacts to public water supplies, the RTN 4-26179 release was classified as Tier I.

#### 3.4 FLINTROCK POND ASSESSMENTS

Per the Order of Conditions: Special Conditions of Approval (SE3-5606), Item 17, the Town of Barnstable Conservation Commission required "new testing results for PFAS in Flintrock Pond." From November 2019 to October 2020, BETA has conducted surface water and sediment sampling at Flintrock Pond.

Elevated concentrations of the total summed of the five PFAs chemicals (PFOS, PFOA, PFNA, PFHxS, and PFHpA) were documented in the pond sediments and surface water; however, no MassDEP or US EPA regulatory standards or guidelines for sediment and surface water are available for comparison. Later compilations of the PFAS data includes the sixth PFAS compound regulated under the MCP, Perfluorodecanoic Acid (PFDA).

Concentrations of PFAS documented within Pond sediments are dominated by the PFOS and PFHxS compounds and increase with distance from the Pond's bank. Refer to the previously completed IRA Status Reports submitted to MassDEP for complete information on the assessment to date of Flintrock Pond.

#### Future Assessment

In response to Commission input and to meet MCP requirements, a comprehensive assessment program for the pond is under development to be implemented during the Phase II CSA. Barnstable County and BETA, in conjunction with Barnstable County dredging department, will install/construct cable crossings of the pond with a means to move a small float or a boat to cross the pond, while systematically obtaining sediment samples from relatively consistent and reproducible locations throughout the Pond. The planned sediment sampling will support the pond's ecological risk assessment per the requirements of 310 CMR 40.0830 and at 40.0995. The additional sampling, especially spatially, will also support the overall conceptual site model as part of Phase II Site assessment and the selection and implementation of a remedial alternative for the Disposal Site. The proposed program is presented in the recently submitted Public Comment Draft Phase II Comprehensive Site Assessment SOW; see Section 3.7.

#### 3.5 SAMPLING AND ANALYSIS FOR PFAS

Following the collection of aqueous and/or soil samples for the analysis of PFAS compounds, BETA submits all samples to Bureau Veritas Laboratories (BV Labs) (formerly Maxxam Analytical) for the analysis of PFAS via USEPA Method 537 modified.

BV Labs is an accredited laboratory located in Mississauga, Ontario that has performed the PFAS analyses for all samples collected from the Disposal Site since the assessment for PFAS impacts began.

BV Labs reports the concentrations of 23 PFAS compounds from aqueous and soil samples with laboratory detection limits as low as 2.0 ng/L (0.002 µg/L). However, for the purposes of achieving the low laboratory detection limits to compare against the MCP GW-1 Standard of 20 ng/L for the monthly performance samples collected at the treatment systems, BV Labs is only able to report 21 PFAS compounds; two additional fluorotelomers are not reported.

Upon receipt of a laboratory report, BETA reviews the concentration data as well as the laboratory case narrative and quality assurance report to ensure no bias is present. BETA summarizes and tabulates the analytical results of six PFAS compounds (PFOS, PFOA, PFNA, PFHxS, PFHpA, and PFDA) based on the MassDEP MCP PFAS risk standards (December 2019). BETA presents the tabulated data and includes the laboratory analytical reports (or Certificates of Analysis) for that reporting period in the monthly IRA Status and RMR reports; the summary data tables, and laboratory analytical reports are included as attachments to these reports.

#### 3.6 PUBLIC INVOLVEMENT

In January 2019, a petition from a group of residents of Barnstable and Hyannis, MA was received, requesting that the Site be designated a Public Involvement Plan (PIP) Site. In response to the request from the local petitioners, Barnstable County designated the Site as a PIP site and began PIP activities in accordance with 310 CMR 40.01404. Notification of the Site Designation and the initial public meeting was provided to all petitioners and the Town of Barnstable officials in writing in February 2019.

On May 2, 2019, a public meeting was held, and a Draft Public Involvement Plan (PIP) was prepared, presented, and distributed. Public comments (as they relate to the response actions implemented for the release of PFAS at the Site and are in accordance with 310 CMR 40.01404) were incorporated into the final Plan, which was finalized on June 27, 2019. See Section 3.7 for information on recent public involvement activities related to the Draft Phase Comprehensive Site Assessment (CSA) SOW.

## 3.7 PUBLIC COMMENT DRAFT PHASE II COMPREHENSIVE SITE ASSESSMENT SCOPE OF WORK

As noted in 3.3, MassDEP indicated that a formal Phase II Comprehensive Site Assessment (CSA) SOW was required for the RTN 4-26179 PFAS Release Site. On July 16, 2021, a Public Comment Draft Phase II Comprehensive Site Assessment (CSA) Scope of Work was submitted via eDEP and was made available for public comment on July 20, 2021 via distribution to the PIP mailing list of the notice of availability of the draft document. The Draft Phase II CSA SOW document describes the robust assessment activities proposed to meet the objectives as stated in the MCP at 310 CMR 40.0833. A Public Information Meeting was held virtually on August 18, 2021. Per Section 4.23 of the Final PIP, public comments were accepted on the Draft Phase II CSA SOW until August 26, 2021. Several sets of public comment were received. The Phase II CSA SOW is being finalized at this time. Public comments are being addressed and will be incorporated into the final Phase II CSA as appropriate and feasible.

#### 4.0 HISTORICALLY AND RECENTLY COMPLETED IRA ACTIVITIES

Since the submittal of the IRA Plan in September 2016 (as described in section 3.0), remedial response actions and assessment activities have continued to address the PFAS impacts at the Site. Most notably, the Barnstable County and the Cape Cod Commission implemented response actions to refurbish and restart an existing, but not operating groundwater pump and treatment system in 2015 and oversaw the excavation of 200 cubic yards of PFAS impacted soils from the former "Hot Spot" area (a 400 square foot area) for off-Site disposal in January 2017.

From December 2018 through February 2019, Barnstable County implemented the regrading and temporary capping of the southwest corner of the FTA, including the former Hot Spot area, with related stormwater controls, termed the Phase I Stormwater Management Improvements/IRA Plan Modification. Additional details regarding the Phase I Stormwater Management Improvements are included in the February 2019 Reporting Period IRA Status No. 27 Report.

In November 2019, the County procured and started a second treatment system, GWTS #2, in an effort to increase the treatment capacity of groundwater from PRW-4. As a result groundwater conveyed from PRW-4 was split and re-piped and to both GWTS #1 and GWTS #2.

The following is a summary of the historic, continuing, and recent IRA response actions completed at the Site. Additional details regarding these IRA response actions can be found in previous IRA Status submittals.

#### 4.1 CONTINUING OPERATION & MAINTENANCE OF GWTS

Cape Cod Commission oversaw and documented the GWPTS performance on behalf of Barnstable County from July 2015 through February 2018. The Cape Cod Commission also conducted groundwater monitoring and operation of the recovery well, PRW-4.

Monthly performance monitoring samples have been collected since GWTS #1 startup in July 2015, from the influent (PRW-4), midpoint, and effluent sample locations. Since November 2019, performance samples have been collected monthly from both GWTS # 1 and GWTS #2.

Periodic monitoring of the system is required to maintain operation of the VFD and recovery well pump including carbon exchanges, regular backwashing of the carbon vessels, force mains cleanouts, and replacement of the recovery well pumps. This work is currently performed by a wastewater treatment system operator, GWTT, under contract with the County. Since November 2019, GWTT maintains and operates both GWTS#1 and GWTS#2 systems.

IRA activities related to the operation and maintenance of the GWPTS conducted during earlier reporting periods have been described in detail in previously completed IRA Status Reports submitted to MassDEP. Refer to those submittals for complete information. The previously submitted documents are available in MassDEP Sites Database; refer to the follow link to access these reports.

#### https://eeaonline.eea.state.ma.us/portal#!/wastesite/4-0026179.

On behalf of Barnstable County, BETA submits the IRA monthly remedial monitoring reports and status reports summarizing pump and treat system operations for the respective reporting period. These submittals always include the PFAS analytical summary data table from the monthly system samples and the respective laboratory analytical report. As noted previously, the laboratory reports for monthly GWTS performance monitoring provide the results for 21 PFAS compounds in order to allow for lower laboratory reporting limits.

Health Advisories and Regulatory Standards Used for Comparison

During the initial two years of the GWPTS operation (July 2016 through June 2018), the USEPA revised Health Advisory (HA) of 0.070  $\mu$ g/L for two PFAS chemicals, Perfluorooctanoic acid (PFOA) and Perfluorooctanesulfonic acid (PFOS), was used for comparison to the analytical results of GWPTS performance samples. The HA (revised downward to 0.070  $\mu$ g/L in July 2016) applied to each compound individually or for the total concentration of the two (PFOS and PFOA).

At that time, MassDEP adopted the USEPA HA. The USEPA considers its HA to still be in effect. However, for MCP purposes it has been superseded by the promulgation by MassDEP of MCP risk standards for the PFAS6 compounds and Maximum Contaminant Levels for the PFAS6 under the Massachusetts Drinking Water regulations – see below.

On June 11, 2018, MassDEP's Office of Research and Standards (ORS) issued an updated ORS Guideline/HA that applied to the individual concentrations or the total summed of five PFAS chemicals: PFOS, PFOA, Perfluorononanoic Acid (PFNA), Perfluorohexanesulfonic Acid (PFHxS), and Perfluoroheptanoic Acid (PFHpA).

From June 11, 2018 until December 2019, individual concentrations of any of these five compounds or the total concentrations of all were compared to the MassDEP ORS HA of 0.070  $\mu$ g/L.

On April 19, 2019, MassDEP released the Public Comment Draft of proposed revisions to the MCP, which included proposed Method 1 groundwater risk standards for the five PFAS compounds, plus an additional PFAS compound, Perfluorodecanoic Acid (PFDA). A Method 1 GW-1 risk standard of 0.020 µg/L was proposed for the individual concentrations of any of these six compounds or the total concentrations of all six. In December 2019, MassDEP published final MCP Method 1 risk standards for the PFAS6 compounds with an effective implementation date of December 27, 2019. From May 2019 through the current reporting period, tabulated treatment system analytical results have been compared to the six regulated PFAS compounds. The final MCP PFAS risk standards for groundwater include the 6 PFAS compounds of concern (PFAS6) listed above and the 0.020 µg/L<sup>1</sup> which is the GW-1 numerical risk standard for each compound or for the total of the PFAS6. These MCP risk standards are included in all relevant tables in the monthly and quarterly monitoring reports. Except where noted (due to older data), total PFAS compounds included in the final MCP risk standards of December 27, 2019.

#### 4.2 CURRENT OPERATION & MAINTENANCE OF GWPT SYSTEMS

During the July 2021 reporting period, the primary treatment system (GWTS #1) and secondary system (GWTS #2) were in operation for all or portions of the month. GWTS #1 was in operation for approximately 27 days and GWTS#2 was in operation for approximately 21 days GWTS#1 following a carbon change of both LGAC vessels at each system on July 6, 2021. On July 6, 2021, the spent carbon from the four existing LGAC vessels was replaced with approximately 6,000 pounds of virgin Filtrasorb 400 GAC, which was then allowed to hydrate for approximately 72 hours. Both systems (GWTS #1 and GWTS#2) were restarted on July 9, 2021.

On July 23, 2021, BETA collected performance samples from both GWTS #1 and GWTS #2 systems, which were both in operation at the time of sample collection.

#### 4.2.1 REMEDIAL MONITORING REPORT – GWPTS #1

#### <u>GWTS # 1 System Monitoring Results</u>

As noted, system samples were collected on July 23, 2021 from the Influent (PRW-4), Midpoint and Effluent ports and were submitted to Bureau Veritas Laboratories (formerly Maxxam Analytics) of Mississauga, Ontario (Bureau Veritas) for the laboratory analysis of Total PFAS via USEPA Method 537 M.

<sup>&</sup>lt;sup>1</sup> Concentrations of PFAS are presented in the data tables of this report in nanograms per liter (ng/L), also referred to as parts per trillion (ppt) and are reported by the laboratory in those units. However the published MCP Method GW-1 numerical risk standards for PFAS compounds (PFOS, PFOA, PFNA, PFHpA, PFHxS, and PFDA) are in presented in or micrograms per liter (µg/L), also referred to as parts per billion (ppb). In the relevant sections of this report, results are shown in both units.

Refer to the attached Table 1A, for a summary of the GWTS #1 PFAS analytical data. The complete laboratory report is attached in Appendix B.

Recovery well PRW-4 is the source of the Influent groundwater. The total sum of the six Massachusetts regulated PFAS (PFAS6) concentrations in the Influent (PRW-4) sample was 909.3 ng/L (0.9093  $\mu$ g/L), well above the GW-1 risk standards. However, the total PFAS6 concentrations in the Influent has continued in a downward trend since November 2020. Five of the six regulated PFAS compounds were detected at concentrations exceeding the MCP GW-1 risk standard (0.020  $\mu$ g/I); PFDA was detected at a concentration below the MCP GW-1 standard. Based on the splitting of flow from PRW-4 to both groundwater treatment systems, the Influent analytical results apply to GWTS #2, as well as GWTS #1.

The PFAS6 (six MA regulated PFAS compounds) were detected above laboratory detection limits in the Midpoint Sample and the PFOS compound was detected at a concentration (50 ng/L) above the applicable MCP GW-1 risk standard. For the purposes of achieving the lowest MDLs and RDLs<sup>2</sup> (for comparison to the MCP Method 1 Groundwater standards), Bureau Veritas reports the results for 21 PFAS compounds, including two (2) PFAS precursors; this allows the laboratory to achieve RDLs low as 2.0 ng/L. The laboratory report provides details of MDLs and RDLs for each PFAS compound included in the analyte list.

The individual PFAS6 compounds concentrations were below the laboratory detection limits and/or below the MCP Method 1 GW-1 standards in the Effluent Sample. However, the sum of the PFAS6 was 20.7 ng/L, just over the applicable GW-1 standard. A potential cause of the slight exceedance may be that the new GAC was not backwashed prior to restarting the system, resulting in sorption efficiency that was not optimal when the performance sample was collected. It is the recommendation of the manufacturer, Calgon, that the Filtrasorb 400 granular activated carbon (GAC) is initially and frequently backwashed during the lifetime of the carbon<sup>3</sup>. To note, backwashing of new GAC before re-start has not been practiced on the FTA GWT systems since their start-up without detrimental effects. The GAC is frequently backwashed (weekly to bi-weekly depending on the backpressure conditions observed by the operator) by the GWTS operator during normal operation and maintenance. The carbon was subsequently backwashed on July 30, 2021. The remaining 15 reported PFAS compounds are reported in the attached laboratory report. Refer to the Table 1A and the complete laboratory report in Appendix B for the concentrations of the remaining unregulated PFAS compounds as well as the laboratory RDLs and MDLs.

#### GWTS #1 Operational Details

The attached Table 2A presents the GWTS #1 performance data. As presented on Table 2A, the system was off from July 6, 2021, to July 9, 2021 for GAC changeout and hydration of the carbon. For the July 2021 reporting period, the overall (average) system flow rate and gallons of groundwater treated are based on the effluent flow meter/totalizer readings reported for the system. On this basis, approximately 0.531 million gallons of groundwater were treated during this July 2021 reporting period, at an average effluent flow rate of 13.7 gpm. Based on the approximate 0.531 million gallons treated and total influent concentration of 909.3 ng/L (July 2021 sample results), approximately 0.0018 kilograms of PFAS were estimated to have been removed from the groundwater by GWTS #1 during this reporting period.

The average Effluent flow rates for the reporting period are somewhat low compared to typical months; the lower flow rates are assumed to reflect the three-day shutdown (for GAC changeout) and the low influent rates to the system.

<sup>&</sup>lt;sup>3</sup> Calgon Carbon Corporation, Data Sheet: Filtrasorb® 400: Granular Activated Carbon, 2019, DS-FILTRA40019-EIN-E1.

<sup>&</sup>lt;sup>2</sup> Method Detection Limits and Reportable Detection Limits.

During later weeks of the period, the effluent flow rates also reflect a relatively low setting (speed) on the variable rate transfer pump (variable frequency drive or VFD pump); GWTT did not increase the flow rate at the VFD to the normal operating conditions in an effort to reduce the potential for iron fouling of the fresh GAC.

The estimated, instantaneous combined Influent flow rates (for both systems) ranged from approximately 31.4 gpm to 19.1 gpm (the approximate average instantaneous flow rate for both systems was 26.0 gpm). Due to the method used to estimate the instantaneous influent flow rate (timing of rise of groundwater in the GWTS #1 Equalization Tank with <u>both</u> force mains discharging to it), the estimated influent flow rates noted above and on Table 2A (shown in the Combined Instantaneous Estimated Flow Rate column) apply to both systems, combined. Therefore, during the normal mode of operation, with the flow from each force main flowing to only one system, it is assumed that roughly 50% of the instantaneous influent rates stated above actually flows to GWTS #1 for treatment. Those values are shown on Table 2A in the Estimated Instantaneous Flow Rate column.

As noted, the average Estimated Instantaneous Influent Flow Rate for GWTS #1, approximately 13.0 gpm, is calculated based on the assumption that 50% of the total flow goes to GWTS #1. The Instantaneous Influent Flow Rates are indicative of the output of PRW-4 and conveyance capacity of the influent force mains from the well to the treatment systems. During the July 2021 reporting period, these rates remained relatively consistent but were somewhat lower than previous periods. The causes of the decrease in flow rates are not definitively known, but are assumed to be related to iron sediment fouling and abnormally low precipitation.

As detailed in the IRA Status and RMR reports for previous reporting periods and following the replacement of the submersible pump in PRW-4 in November 2020, iron-oxide sediment appears to be continuing to impact the system flow rates. In an effort to combat the iron-oxide sedimentation build-up and maintain the efficacy of GAC PFAS removal, GWTT has continued to perform backwashes of the carbon vessels relatively frequently. During this reporting period, the primary carbon vessel was backwashed on July 30, 2021. This practice appears to have materially increased the lifespan of the GAC. Additionally, GWTT has varied the speed of the transfer pump (which directly controls the Effluent Flow Rate) in an effort to reduce the amount of iron oxide sediment/sludge being drawn from the EQ tank into the bag filters and ultimately into the GAC vessels, especially after the carbon changeout.

#### 4.2.2 REMEDIAL MONITORING REPORT – GWPTS #2

#### GWTS # 2 Monitoring Results

As previously mentioned, BETA collected performance samples from GWTS #2 system on July 23, 2021. Samples collected from the Influent (PRW-4), Midpoint, and Effluent ports were submitted to Bureau Veritas for the laboratory analysis of Total PFAS via USEPA Method 537 M. As noted above, recovery well PRW-4 is the source of the Influent groundwater to both groundwater treatment systems. Therefore, the Influent analytical results apply to GWTS #2, as well as GWTS #1.

The attached Table 1B, summarizes the GWTS #2 PFAS analytical data. The complete laboratory report is attached in Appendix B.

As previously mentioned, the tabulated treatment system analytical results from GWTS #2 are reported and compared to the PFAS6 compounds and their respective MCP Method 1 GW-1 Standards. The total sum of the six PFAS concentrations in the Influent sample was 909.3 ng/L (0.9093  $\mu$ g/L), well above the GW-1 risk standards.

Five of the six regulated PFAS compounds were detected at concentrations exceeding the new MCP GW-1 risk standard (0.020  $\mu$ g/l or 20 ng/L). As previously mentioned, these detections may be the result of not initially backwashing the fresh GAC prior to system startup.

The PFAS6 compounds were detected at concentrations above the laboratory reporting limits in this July 2021 Midpoint sample; and two of the PFAS6 compounds (PFOS and PFHxS) were detected at concentrations above the GW-1 risk standard.

The PFAS6 compounds were not detected in the Effluent sample above the laboratory reporting limits with the exception of PFOA, which was detected at a concentration of 0.51 ng/L. As previously mentioned, these detections may be the result of not initially backwashing the fresh carbon prior to system startup. The detectable concentration of PFOA is well below the applicable MCP Method 1 GW-1 Standard (20 ng/L). Furthermore, the remaining 20 PFAS compounds reported in the full laboratory report were below the laboratory detection limits in the Effluent sample. These results are summarized in Table 1B and a copy of the laboratory report is in Appendix B.

#### GWTS #2 Operational Details

The attached Table 2B summarizes the GWTS #2 performance details. The system was shut down on June 3, 2021 until the carbon changeout occurred on July 6, 2021, and therefore was operational for approximately 21 days during the July 2021 reporting period.

As described in previous sections, during the normal mode of operation, with the flow from each force main flowing to only one system, it is assumed that roughly 50% of the instantaneous influent rates discussed above for GWTS #1 actually flows to GWTS #2 for treatment. Based on that assumption, for the July 2021 reporting period, the calculated average estimated instantaneous flow rate for GWTS #2 was approximately 14.1 gpm. As noted in the GWTS #1 performance review above, during the July reporting period, the instantaneous influent flow rates (total to both systems) remained fairly consistent, but lower than optimal conditions. The possible contributing factors were discussed above.

The overall (average) system flow rate and gallons of groundwater treated were based on the Effluent Flow Rate/net totalizer readings reported for the system by the O&M contractor; approximately 0.42 million gallons of groundwater were estimated to be treated during this reporting period for July 2021, at an approximate Average Effluent Flow Rate of 14.0 gpm.

Based on 0.42 million gallons treated, approximately 0.001 kilograms of PFAS were estimated to have been removed from the groundwater during this reporting period.

#### 4.2.3 REMEDIAL MONITORING REPORT SUMMARY

During the July 2021 reporting period, the two treatment systems, GWTS #1 and GWTS #2, were in operation for all or portions of at least 21 days. GWTS#1 was in operation for approximately 27 days and GWTS#2 was in operation for approximately 21 days. The overall (average) system flow rate and gallons of groundwater treated are based on the available Effluent flow totalizer readings for both systems. For the reporting period from July 1 to July 30, 2021 both systems treated an approximate combined 0.95 million gallons of groundwater from the downgradient recovery well PRW-4 at an average, total (of the two systems) effluent flow rate of 27.1 gpm.

Based on 0.95 million gallons treated, approximately 0.002 kilograms of PFAS were estimated to have been removed from the groundwater during this July 2021 reporting period.

Figure 5 depicts the concentration trends observed in groundwater at the extraction well PRW-4, as measured as the Influent to the groundwater treatment systems. In addition, the Midpoint concentrations for GWTS #1 are graphed.

Due to the nature of the laboratory data reported since 2015, this graph depicts the total of the PFOS and PFOA compounds only. Following a spike in concentrations in mid-2019, PFOS and PFOA concentrations have generally decreased or remained relatively stable at PRW-4. The detected concentrations remain elevated relative to the GW-1 risk standards.

#### 4.3 QUARTERLY GROUNDWATER MONITORING

Groundwater monitoring activities related to the documented PFAS Release on Site have been ongoing since November 2013. BETA, formerly Nover-Armstrong Associates, was contracted by Barnstable County to provide LSP and environmental services in April 2018 and has conducted groundwater monitoring activities since June 2018.

In November 2018, BETA proposed a long-term monitoring sampling plan for Site-wide groundwater monitoring on a quarterly and annual basis. Following discussion, MassDEP approved of the sampling plan that included sampling of twelve (12) wells during three quarterly sampling events and sampling an additional eight (8) wells (for a total of twenty (20) during the annual sampling round.

A copy of the plan can be found in previous IRA Status report submittals, including IRA Status Report and RMR No. 35 for the October 2019 reporting period. Additional monitoring points are added to either the quarterly or annual sampling round, as warranted to meet specific objectives or provide additional coverage.

BETA has conducted quarterly groundwater assessments since January 2019 under the approved program. The January 2019 event was selected as the original annual monitoring program for 2019 utilizing the selected 20 monitoring wells. In order to support the design of the proposed groundwater recovery expansion (an IRA Plan Modification), it was decided to move the annual monitoring round up to October 2019, and to add several wells to the sampling program. Subsequently, the annual groundwater monitoring program is held annually in October.

#### 4.3.1 JULY 2021 SITE-WIDE QUARTERLY GROUNDWATER SAMPLING AND ANALYSIS

On July 27 and 28, 2021, BETA conducted a quarterly groundwater monitoring event based on the MassDEP approved sampling plan. A total of 12 monitoring wells were sampled for the laboratory analysis of total PFAS by EPA Method 537 Modified. On those dates the following monitoring wells were sampled: HSW-6, PFW-1, PFW-5, OW-8A, PC-6A, PC-11, PC-16d, PC-28, PC-30, PC-38, MW-13, and MW-23. The July 2021 program included the monitoring wells MW-13 and MW-23 as replacements for MW-12 and MW-22 because it was determined that these wells were dry during the initial gauging. Additionally a groundwater sample from PC-1 was not collected because of malfunctioning sampling equipment. Monitoring well PC-38 was added to the standard quarterly sampling program. Figure 2 and Figure 3 depict sampling locations.

All sampled wells and all wells located within the immediate vicinity of the FTA property were gauged prior to sampling. Groundwater gauging data and groundwater elevation data are included in Table 3, appended.

Monitoring wells HSW-6, PFW-1, PFW-5, OW-8A, are located on the FTA property; HSW-6 is located within the former Hot Spot remediation area and PFW-1 is located approximately 130 feet downgradient of the former Hot Spot remediation area. PFW-5 and OW-8a are located cross-gradient of the Hot Spot area on the FTA property. The downgradient monitoring wells (MW-13, MW-23, PC-11, , and PC-6A), located between the FTA and the recovery well (PRW-4), were selected based on previous results to evaluate current conditions within the main PFAS plume.

Monitoring wells PC-9, PC-16d, PC-28, and PC-30 are located in the probable downgradient direction from recovery well PRW-4. Monitoring well PC-38 is located in the most southeastern downgradient location from the FTA.

The PFAS analytical data for the most recent July 2021 sampling round are included in Table 4. A copy of the laboratory report/certificate of analysis for the July 2021 sampling event is included in Appendix B. The laboratory report in Appendix B present all analytical results for all reported PFAS compounds, including laboratory detection and reporting limits. As previously discussed, effective December 27, 2019, MCP groundwater risk standards for 6 PFAS compounds, (PFOS, PFOA, PFHpA, PFNA, PFHxS, and PFDA) apply to the Site with a GW-1 risk standard of 20 ng/l for the total and/or any single compound. These risk standards are included on Table 4.

Individual concentrations of one or more of the (regulated) PFAS6 compounds and Total Concentrations of the PFAS6 detected in the samples from all wells during the May 2021 sampling event were above the MCP GW-1 risk standards, except at PC-38. As noted, the results for the additional 17, unregulated PFAS compounds reported by the laboratory are included in the attached laboratory report (Appendix B).

Table 4 also summarizes the sampling dates and PFAS6 concentrations detected during all sampling events at the Site. All previous laboratory reports were included with previously submitted status reports. Overall, PFAS concentrations detected in groundwater across the Disposal Site during the July 2021 round of groundwater assessment are similar to historic ranges. Although the total PFAS6 concentrations documented in groundwater within the Disposal Site are significantly above the current applicable MCP Method 1 risk standards, concentrations have trended towards a significant decrease in some areas of the Site since PFAS assessment activities started in 2015, especially in the Hot Spot/ Phase 1 cap area. Exceptions to the general trend are discussed below.

BETA's review of the July 2021 groundwater data compared to historic sampling events indicate that concentrations of PFAS documented in groundwater located on the FTA property and immediately east continue to appear to be falling or relatively stable. Figures 6 through 9, attached and discussed below, are graphical presentations of total (sum of) PFAS6 concentrations for selected monitoring wells in representative locations across the Disposal Site. It should be noted that the graphs depict discrete periodic sampling events at varying intervals from initial sampling in April 2015 and at quarterly intervals (typically) since January 2019. In addition, due to the range of PFAS concentrations, the graphs have different scales on the vertical axes for PFAS concentrations.

Figure 6 depicts the concentration trends observed in groundwater at monitoring well PFW-1. Since the implementation of the Phase I stormwater improvements during the winter of 2018/2019, which included installing an impermeable cap over the former Hot Spot removal area and adjacent areas and diverting stormwater, PFAS concentrations have generally decreased significantly through mid-to late-2019 and have since remained relatively steady at elevated levels relative to the GW-1 risk standards.

Figure 7 depicts the significantly downward trend of PFAS6 concentrations observed in groundwater monitoring well OW-8A, which is located on the northeastern portion of the FTA, through the October 2020 quarterly sampling event. A noticeable increase in PFAS6 total concentrations from the October 2020 to the January 2021 sampling event is observed. Although the cause of this increase is not known, it is of BETA's opinion that increased precipitation may have influenced the concentration spike in the January 2021 sampling event. Detected concentrations observed in May 2021 and July 2021 are at least 700 ppt less than concentrations observed in January 2021; this may be attributed to lower-than-average precipitation rates and a significantly deeper groundwater table. To date, assessment at the Site has revealed PFAS contamination within shallow soils and the immediate vadose zone.

As previously mentioned, gauging activities revealed monitoring wells MW-12 and MW-22 were dry and sufficient water was not available to collect a sample. BETA collected groundwater samples from the nearby wells MW-13 and MW-23 instead. The sum of the total PFAS6 concentrations from MW-13 were all below laboratory reporting limits and the sum of the total PFAS6 concentrations detected in MW-23 were similar to historic concentration trends observed from MW-22.

PFAS concentrations documented in wells located farther southeast and downgradient of the FTA, specifically PC-6A, PC-28, PC-16D, and PC-30, have long term variable trends. Figures 8, 9A, and 9B depict PFAS concentration trends in PC-6A, PC-28, and PC-30 respectively. PC-6A (Fig. 8A) shows variable concentrations; however, concentrations observed since the Spring of 2019 have been relatively stable with a decreasing trend. As depicted on Figure 9A, groundwater concentrations at PC-28 were significantly higher in October 2020 and January 2021 than previously detected; however, since January 2021, detected PFAS6 concentrations have decreased significantly. As shown on Figure 9B, since February 2020, PFAS6 concentrations at PC-30 have exhibited a decreasing trend.

Monitoring well PC-38, the furthest south-southeast (PC-38) location sampled during this quarterly monitoring event, did not exhibit PFAS6 concentrations above the laboratory reporting limits. Groundwater sampled from PC-38 since April 2017 has only had a few detectable concentrations documented. All documented detections have been well below the applicable MCP Method 1 GW-1 standards.

The causes of the variable concentration trends observed at some wells (specifically PC-6A, PC-28, and PC-30) located further south and southeast of the FTA (towards Mary Dunn Pond) are not clear. However, based on the July 2021 data, the concentrations appear to be decreasing. These trends may be influenced by variable groundwater extraction by the current FTA pumping system, variable pumping rates of the three active Mary Dunn municipal wells, the timing and duration of operation of the Mary Dunn wells and variable precipitation amounts. The well pump at PRW-4 was underperforming from July 2020 to November 2020, when it failed requiring replacement of the well pump and piping. The well casing, pump, and riser piping were found to be severely fouled with iron oxide sediments. The failure of the well pump and downtime for replacement may be a contributory factor for the PFAS6 concentration increase observed at PC-28. Concentrations appear to be decreasing now, which may be attributable to restoration of more typical extraction rate and capture at PRW-4.

Utilizing the total sum of the six regulated PFAS compounds, concentration data were interpolated to depict an approximate concentration plume map based on the July 2021 monitoring results. Figure 10 depicts the concentration plume for the July 2021 monitoring results; the highest concentrations within the PFAS contaminant plume appear to be concentrated on the south end of the Site and in the vicinity of PRW-4. The lowest concentrations (below the Method 1 GW-1 standards) are on the outer northeastern and southeastern edges of the plume.

#### 4.3.2 SITE-WIDE GROUNDWATER GAUGING AND ELEVATION SURVEY

BETA gauged depth to groundwater in the monitoring wells located on and within 100 feet of the FTA and in selected monitoring wells east and southeast of the FTA on July 27, 2021. The Table 3 presents a tabulated summary of the seasonal groundwater elevation data (from 2018-2021) for selected monitoring points across the Disposal Site.

Groundwater flow is inferred to be to the south-southeasterly direction. Refer to Figure 11 for a depiction of the calculated groundwater flow from the July 2021 gauging event. The gauging results indicate moderate influence from the operating recovery well, PRW-4.

#### 5.0 SITE WIDE CAPPING AND SELECT BUILDING DEMOLITION

In response to the Request for Expedited Immediate Response Action Plan Modification/Interim Deadline-Enforcement Document Number 6694, dated May 1, 2019 issued by the Massachusetts Department of Environmental Protection (MassDEP) and amended by email correspondence by the MassDEP, BETA (on behalf of the County) submitted a Draft IRA Plan Modification to DEP detailing preliminary plans for the expansion of the groundwater recovery and treatment system and capping measures to prevent infiltration of precipitation through the soils at the Site. Following the receipt of public comment, the IRA Plan Modification was finalized in December 2019 and design plans for Sitewide capping were submitted for approval to the Town of Barnstable via a Notice of Intent in February 2020. Final design approval and an Order of Conditions was obtained in November 2020 and January 2021 respectively.

The construction of the capping project will be funded via the Clean Water Trust State Revolving Fund (CWTSRF); the County received Bids for the project in April 2021. An IRA Plan Modification No. 3 was finalized and submitted electronically to DEP following the receipt of public comment on June 22, 2021. The capping project was awarded in July 2021.

Although not during the current reporting period, construction began in August 2021, before the filing of this status report, and is currently underway. Construction progress will be described in more detail in the status reports for the period in which the work actually occurs. For informational purposes, the following general update on the construction progress is provided.

The former burn buildings and other fire training props and features have been demolished and removed from Site. Approximately 650 tons of PFAS contaminated demolition debris and materials associated with these structures were transported and disposed of at the US Ecology / Wayne Disposal, Inc. disposal facility in Belleville, MI in September 2021. Portions of the stormwater system have been installed and regrading of the FTA is underway in preparation of paving activities to begin. The completion of the cap and associated stormwater drainage installation is expected by the end of October or early November 2021. As noted, additional details about the project will be included in future IRA Status reports.

#### 6.0 IRA EVALUATION

In accordance with the MCP, this section presents evaluations of potential IRA conditions at the Site.

#### 6.1 ASSESSMENT FOR SUBSTANTIAL RELEASE MIGRATION (SRM)

Due to the documentation that PFAS has most likely migrated more than 200 feet downgradient and has been detected in a public water supply well and surface water body, the Site meets the criteria for a Condition of Substantial Release Migration (SRM), as defined by 310 CMR 40.0006.

#### 6.2 IDENTIFICATION OF CRITICAL EXPOSURE PATHWAYS (CEP)

No Critical Exposure Pathways, as defined by 310 CMR 40.0006, currently exist at the Disposal Site.

#### 6.3 IMMINENT HAZARD (IH) EVALUATION

Based on the concentrations of PFOS exceeding the USEPA HA level in the Mary Dunn wells in 2013, the Cape Cod Commission identified the presence of an Imminent Hazard (IH) condition pursuant to 310 CMR 40.0321(2)(c).

The GAC treatment of the Mary Dunn Wells has been assumed to be actively preventing a potential Imminent Hazard to the Hyannis community by removing the PFAS compounds from the water supply.

The Mary Dunn wells are monitored on a regular basis by the Hyannis Water Department to ensure that exposure to humans is less than the USEPA HA, the MassDEP Drinking Water Standards effective on December 27, 2019 and the finalized MassDEP MCL (MMCL) standard. MassDEP finalized the MMCLs for PFAS in January 2021; the final MCL for PFAS in drinking water is 20 ng/l and applies to the 6 regulated PFAS compounds.

#### 6.4 ASSESSMENT OF NEED FOR IMMEDIATE RESPONSE ACTIONS (IRA)

The operation of the on-Site groundwater pumping and treatment system to reduce PFAS concentrations downgradient of the FTA will continue as an IRA. Continuation of assessment IRAs is warranted; specifically, periodic monitoring of groundwater at the Site and monitoring the PFAS treatment of the output of the Hyannis Water District/Town of Barnstable operated Mary Dunn Wells.

However, Site-wide assessment will also be proceeding under the Phase II Comprehensive Site Assessment (CSA) Scope of Work (SOW); the SOW was submitted for public comment. The County and BETA are in the process of reviewing these comments for incorporation into the Final Phase II CSA SOW as deemed feasible and necessary per MCP compliance. Additional technologies to treat / remove PFAS from soil and groundwater at the FTA will be evaluated as part of the MCP Phase III evaluation of remedial alternatives.

In addition, planned expansion of groundwater extraction and treatment, as mandated by MassDEP, was described conceptually in the final December 2019 IRA Plan Modification. The final design and implementation of that component of the IRA Plan Modification is being re-evaluated in terms of feasibility of implementation as an IRA and potential overlap and duplication with MCP Phase III and Phase IV (remedy implementation) work to be conducted immediately following the completion of the Phase II CSA.

#### 7.0 PUBLIC NOTIFICATIONS

Copies of public notification letters regarding the proposed IRA activities sent to officials of the Town of Barnstable in accordance with MCP 310 CMR 40.1403(3) (a) requirements are included as Appendix C. Per the Final PIP, email and written notifications regarding the submittal of this IRA Plan Modification to MassDEP and the availability of the Plan at the Site repository will be sent to those listed on the PIP Mailing List.

<u>TABLES</u>

Notes:
1. Concentrations presented in ng/L - nanograms per Liter - parts per trillion
2. \* - Prior to June 11, 2018, the USEPA established the EPA Health Advisory for two PFAS chemicals, PFOA and PFOS, which was 70 ng/L. Subsequently, MassDEP's Office of Research and Standards (ORS) expanded on this Health Advisory
and created the ORS Guideline that applied to the total summed of five PFAS chemicals, PFOA, PFNA, PFHAS, and PFHpA, effective June 11, 2018.
3. On December 13, 2019, MassDEP published the envyl established clean up standards for PFAS in soil and groundwater. These standards were effective as of December 27, 2019 and apply to the total sum of six PFAS chemicals, PFOA, PFNA, PFHAS, PFHpA, and PFDA:
the new standard is 20 ng/L or parts per trillion (ppl). Concentrations of the six PFAS compounds presented in the table were not compared to the new MassDEP standards until the January 2020 monthly system sample collection, which is after the effective date of December 27, 2019.

- 9. PFOA Perfluorooctanoic Acid
- 10. PFNA Perfluorononanoic Acid
- 11. PFHxS Perfluorohexanesulfonic Acid
- 12. PFHpA Perfluoroheptanoic Acid
- 13. PFDA Perfluorodecanoic Acid
- 14. NA Concentration data not available

#### Notes:

1. Concentrations presented in ng/L - nanograms per Liter - parts per trillion

2. MassDEP's Office of Research and Standards (ORS) expanded upon the USEPA's Health Advisory and created the ORS Guideline that applies to the total summed of five PFAS chemicals, PFOS, PFOA, PFNA, PFNA, effective June 11, 2018.

3. Concentrations of the PFAS compound, PFDA, are presented based on the April 19, 2019, MassDEP draft of new/proposed groundwater standards for PFAS that includes a sixth, PFAS compound, PFDA. However the concentration of PFDA is not inclued in total PFAS removal calcuations.

5. BRL - Below Laboratory Reporting Limits; reporting limit shown in parentheses.

6. Concentrations in bold exceed applicable MassDEP ORS Guideline

7. PFOS - Perfluorooctanesulfonic acid

8. PFOA - Perfluorooctanoic Acid

9. PFNA - Perfluorononanoic Acid

10. PFHxS - Perfluorohexanesulfonic Acid

11. PFHpA - Perfluoroheptanoic Acid

12. PFDA - Perfluorodecanoic Acid

13. --: Concentration data not available and/or sample was not collected on that date.

14. Per MCP Regulations, the system was sampled one day, three days, and seven (7) days following the initial week of startup (11/11/19).

15. On December 13, 2019, MassDEP published the newly established clean up standards for PFAS in soil and groundwater. These standards were effective as of December 27, 2019 and apply to the total sum of six PFAS chemicals, PFOS, PFOA, PFNA, PFHAS, PFHAA, and PFDA. Concentrations of the six PFAS compounds presented in the table were not compared to the new MassDEP standards until the January 2020 monthly system sample collection.

16. The December monthly sample was collected from the system's effluent stream on 12/17/2019 following the receipt of the laboratory results from the 11/19/2019 sampling event on 12/16/2019.

The effluent was resampled again to ensure significant breakthrough was not occurring from the secondary carbon vessel.

Adjusted VFD to 33 Hz. Flushed iron sludge/sediment out of bottom of sight glass on EQ holding tank. Conducted system checks and changed bag filters. Conducted system checks and changed bag filters. Conducted system checks, changed bag filters. Conducted system checks and change bag filters. Increase discharge flow through VFD from 23 Hz to 35 Hz. Pressure readings at primary LGAC vessel indicating a need for a backwash. Conducted system checks, changed bag filters. Conducted a backwash on primary LGAC vessel. Initial instantaneous Effluent flow rate was measured at 75 GPM after backwash. Conducted system checks, changed bag filters, adjusted VFD from 24 Hz to 20 Hz. Conducted system checks, changed bag filters, adjusted VFD from 24 Hz to 20 Hz. Conducted system checks, changed bag filters, adjusted VFD from 24 Hz to 20 Hz. Conducted system checks, changed bag filters, adjusted VFD from 24 Hz to 20 Hz. Con

Notes

Notice: 1. CE - Coastal Engineering. GWTT - Groundwater Treatment Technologies 2. Prior to November 2019, the instantaneous Influent (WF) and efficient (EFF) flow rates are calculated based on the cross-sectional volume per vertical foot of the influent tank and the measured/timed filling (WF) rate or draining (EFF) of the tank. The diameter of the influent tank is approximately 78 inches. The cross-sectional volume of the tank is approximately 31 acubic feet per vertical linear (or tank) refores the four variable fractor is approximately 122.5 gallons per 6 inches. Since 11/7/2019 (following the replacement of the effluent totalizer. ONLY INF flow rates (from PRW-4) are calculated based on an approximation. This Combined Instantaneous Influent flow rate represents the combined flow within both force main pipes from recovery well PRW-4 and since the startup of GWTS#2.

3. Prior to November 2019 the total mass of PFAS removed is calculated based on the calculated influent flow rate, the number of days the system has been operating, and the average total influent PFAs concentration for the month. Since November 2019, the total mass of PFAS removed is calculated based on the

Prior to November 2019 the total mass of PFAS removed is calculated based on the calculated influent flow rate, the number of days the system has been operating, and the average total influent FPAs concentration for the month. Since November 2019, the total mass of PFAS removed is calculated based on the differential pressure readings from the bag filter unit's pressure gauges before and after the bag filters are changed/replaced, if applicable.
 A or --Not Applicable.
 No to reported
 A so A prior 1. 2019; the system's O&M data reporting was changed to include the differential pressure readings from the bag filter unit's pressure gauges before and after the bag filters are changed/replaced, if applicable.
 Prior to November 2019; the varage influent flow rate could nor fielably be calculated/measured from Spitember 1 (2019; chance are estimated by approximating 50% of the Combined instanance influent flow rate values.
 Instantaneous Effluent Flow rate is calculated or indicated from the totaliar flow meter on the system's effluent discharge piping -reading is collected dare to a flight change and/or tackwashing.
 The Average effluent flow rate is calculated from the regulated listication of the meter and regulater readings. The totalizer flow meter radeings. The totalizer flow meter radeings. The totalizer flow meter radeings is not be effluent flow rate is lass of the effluent flow rates less than 40 GPM.
 Therefore the data average effluent flow rate is less thon 40 GPM.
 A of September 2019, the "Totals' shown (from left to right) include the Average Instantances filter than regulations (filter flow rates less than 40 GPM.
 A for the data average effluent flow rates less than 40 GPM.
 A for specific the data average effluent flow rates is shown (from left to right) include the Average Instantances filter flow rates calculated from the resporting period.
 A for spec

 sediment accumulation in EQ tank.

 Yes
 No
 Conducted system checks, changed bag filters. Raising floats in EQ tank has not affected the iron sediment at the bottom.

Conducted system checks and changed the bag filters. System shutdown temp

are checks and changed the bag filters. System shutdown temporarily to calculate influent flow rate at GWTPS

porarily for pump out of iron oxide sediment accumulation in EC

System off upon arrival and bag filters were completed clogged with iron sediments. Bag filters had to be changed after 20 minutes of operation GWT observed a high amount of solids floating in the EQ tank and pumped down the EQ tank and observed significant iron assignment slogge the bottom of the tank. GWTT notified BETA that they would raise the floats in EQ tank to help lessen the agatation of the sludge and carryover into the bag filters. System was on high level alarm and continued to shutoff of PRW-4, which shut off system #1 due to significant iron oxide into the bag filters. System was on high level alarm and continued to shutoff of PRW-4, which shut off system #1 due to significant iron oxide into the bag filters.

System restarted at 09:30 AM following carbon changeout conducted on System #1. Conducted system checks and changed bag filters.

Conducted system checks, changed bag filters. Backwashed primary LGAC vessel, vaccumed the iron-oxide sludge out of the EQ tank, and int Yes Yes 55-gal drums on site; water from the drum can be decanted back through the system. System sampled on 3/3/2020.

Yes No Conducted system checks, changed bag filters, and slowed down the effluent discharge flow rate to reduce carry over of significant iron sludge into the bag filters.

Yes No System shutdown for 2-4 hours at 7am for Vac out or EQ information and was assessed in EQ holding tank to allow longer run time and less to be a standard to allow longer run time and less to be a standard to allow longer run time and less to be a standard to allow longer run time and less to be a standard to allow longer run time and less to be a standard to be a standar

 Yes
 No
 Conducted system checks and changed bag filters.

No Conducted system checks and changed bag filters.

0.00310 Yes No Conducted system checks and changed bag filters twice during visit, system on idle upon arrival due to high level.

Yes No Conducted system checks and changed bag filters. Backwashed primary LGAC vessel.

icted system checks and changed bag filters

0.00490 Yes No Conducted system checks and changed bag filters. Pumped down green exterior tote holding backwash water from system #1.

Yes No Conducted system checks and changed bag filters. Pumped backwash water from exterior holding totes through system.

Yes No Conducted system checks and changed bag filters twice; influent flow rate has spiked but has caused a large influx of iron sediments.

Conducted system checks and changed bag filters. Pumped down green exterior tote holding backwash water from 5.15.20 through System #2.

Conducted system checks and changed bag filters. Pumped backwash water from System #1 through system and then backwashed primary

System down on arrival due to split/rupture of 2 inch hard hose connecting the transfer pump to the bag filters. Hose was replaced and system

Yes No Conducted system checks: the system is receiving more water (influent) that GWTS#1, operator assumes it's related to the build up of iron in th force main piping.

Notes:
1. GWTT - Groundwater Treatment Technologies
2. Pressure cadings before filter bag changeout or if no changeout was done.
3. Influent How is an instantaneous estimate of the flow rate from the submersible Well Pump at PRW-4.
4. During monthly reporting periods the net galions are calculated from previous effluent totalizer reading. (Difference between the current totalizer reading - the last dated totalizer reading).
5. The Average effluent flow rate is calculated from the net galions dates between the totalizer flow mater and days that the system was in operation.
6. The Totals' shown (from left to right) include the, Total Days of System Operation, Average Instantaneous Influent flow rates are estimated by approximating 50% of the influent How rate and days that the system was in operation.
7. Instantaneous influent flow rates are estimated by approximating 50% of the influent flow rate, acculated from CWPTS 91 (See Table 2A).
8. Instantaneous influent flow rates are similated by approximating 50% of the influent flow rate. (See Table 2A).
9. Flow calculated based on plans marking on CD ank. Estimated flow rate - r.
9. Flow calculated based on plans marking on CD ank. Estimated flow rate - r.
9. Flow calculated based on galions marking on CD ank. Estimated flow rate - r.
9. Flow calculated based on galions marking on CD ank. Estimated flow rate - r.
9. Flow calculated based on galions marking on CD ank. Estimated flow rate - r.
9. Flow calculated based on galions marking on CD ank. Estimated flow rate calculated from the first monitoring date are based on measurements from the last monitoring date of the previous reporting period.
10. The monthly totals represent the monthly IRA reporting period and the average effluent flow rates calculated from the first monitoring date are based on measurements from the last monitoring date of the previous reporting period.

Notes:

1. Prior to June 11, 2018, the USEPA established the EPAH ealth Advisory for two PFAS chemicals, PFOA and PFOS, which was 70 ng/L. Subsequently, MassDEP's Office of Research and Standards (ORS) expanded on this Health Advisory and created the ORS Guideline that applies to the total summed of five PFAS chemicals, PFOS, PFOA, PFNA, PFHAS, and PFHAA, effective June 11, 2018.

2. The USEPA and MassDEP ORS Guideline applies to five PFAS chemicals of concern (PFOS, PFOA, PFNA, PFHpA, and PFHxS) individually as well as the sum of the five PFAS of concern.

3. The complete PFAS concentration data set collected from PRW-4 is detailed in the data table titled "Summary of Groundwater Pump and Treatment System PFOS/PFOA Analytical Data. Data presented herein is summarized and data was selected based on quarterly sampling events.

4. (-) Concentrations of the three additional PFAS chemicals, PFNA, PFNAS, and PFHpA were not presented until after the MassIEP ORS Guideline was in effect on 06.11.18. PFAS concentrations were regulated by the USEPA Health Advisory prior to 6.11.18. Concentrations of PFDA were not presented prior to April 19, 2019. MassIEP released drafted Method 1 groundwaterrisk standards for PFAS on April 19, 2019 that applies to the total sum and individual concentrations of six PFAS compounds (PFOS, PFOA, PFNA, PFHAS, PFHpA, and PFDB), which is 20 ng/L. These drafted groundwater standards were finalized and became effective on December 27, 2019.

5. BRL - Below Laboratory Detection Limits

6. Concentrations presented in ng/L - nanograms per Liter - parts per trillion

7. Concentrations in bold exceed applicable Health Advisory Limit or Method 1 GW-1 Standard 8. PFOS - Perfluorooctanesulfonate

9. PFOA - Perfluorooctanoic Acid

10. PFNA - Perfluorononanoic Acid

11. PFHxS - Perfluorohexanesulfonic Acid

12. PFH pA - Perfluoroheptanoic Acid

13. PFDA - Perfluorodecanoic Acid

14. NA - Concentration data not available

15. Monitoring well HS-1, HS-2, HS-25, and HS-6 were destroyed or removed during soil removal activities in January 2017 as part of an Immediate Response Action Plan. The well was replaced with HSW-1/HS-1a as post-exacavation activities.

16. Monitoring well HW-1D is a downgradient well located on the north side of Mary Dunn Pond.

17. NE- Not Established

MassDEP Phase 1 Site Assessment Map

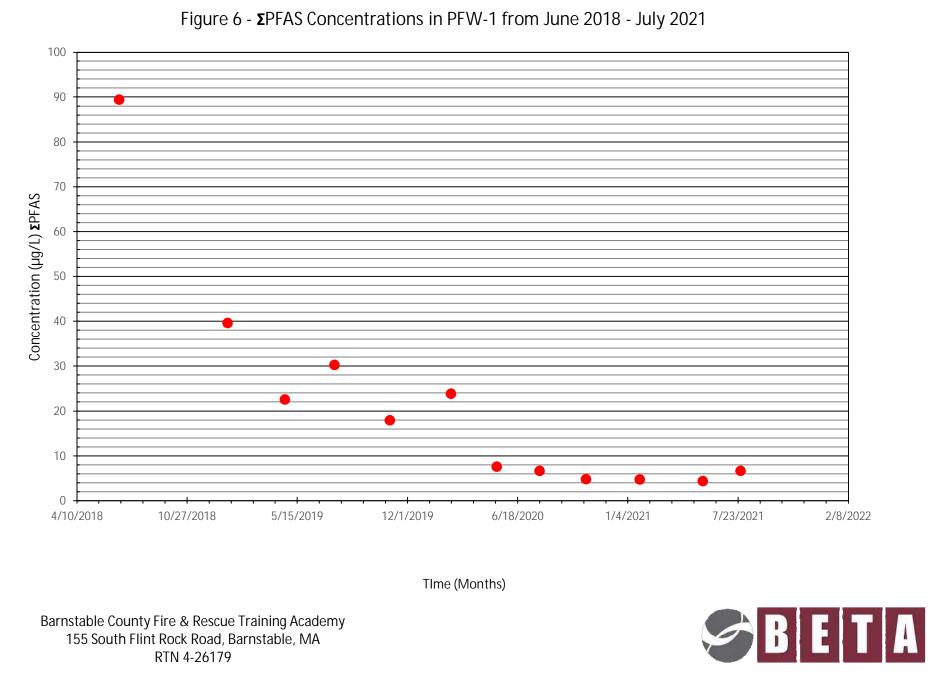

PFOS/PFOA Concentration (µg/L)

Notes: 1. Concentrations depicted represent the sum of the perfluorooctanesulfonic acid (PFOS) and the perfluorooctanic acid (PFOA) compounds in micrograms per liter (µq/L).

2. Concentration data points at 0 µg/L from Midpoint sample location, indicate a sample was not collected from the Midpoint location on that date or was detected below laboratory reporting limits.

Notes:

1. Concentrations depicted represent the sum of the the five (5) PFAS compounds, PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to current graphical date represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to current graphical date represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to current graphical date represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to current graphical date represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, PFNA, and PFDA.

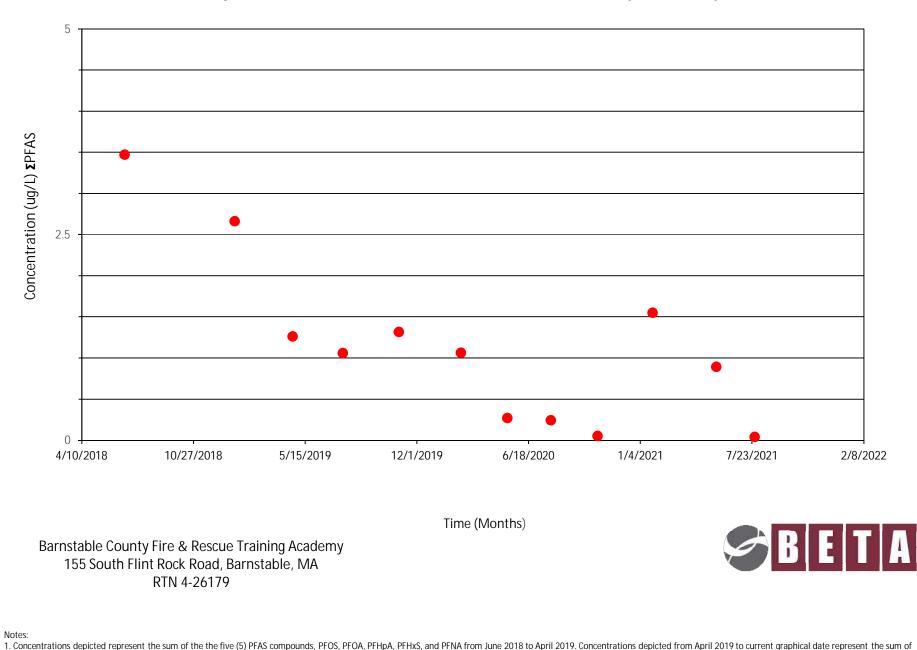

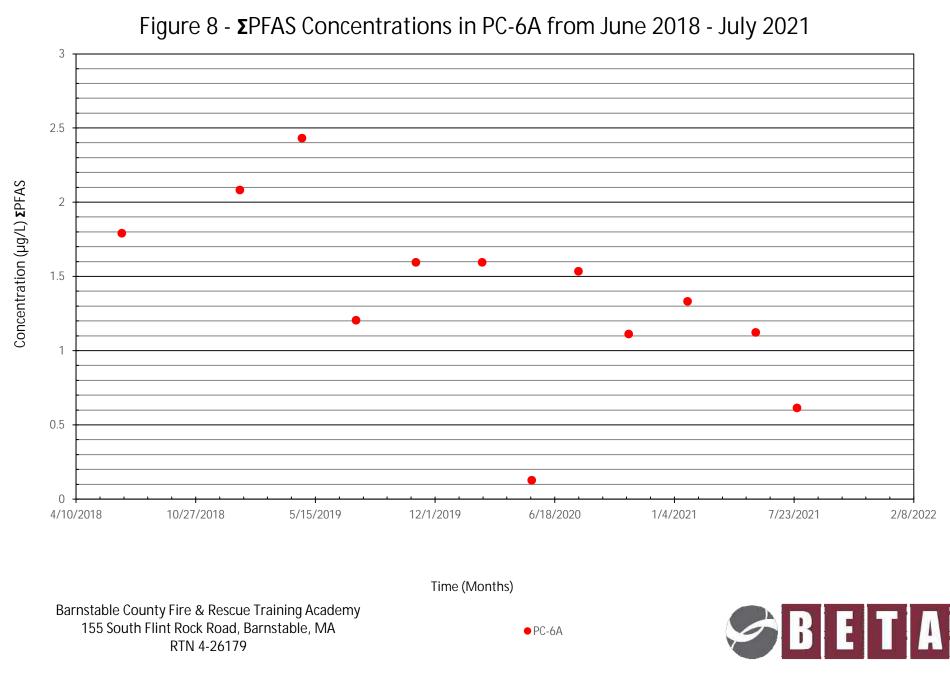

Figure 7 - ΣPFAS Concentrations in OW-8A from January 2019 - July 2021

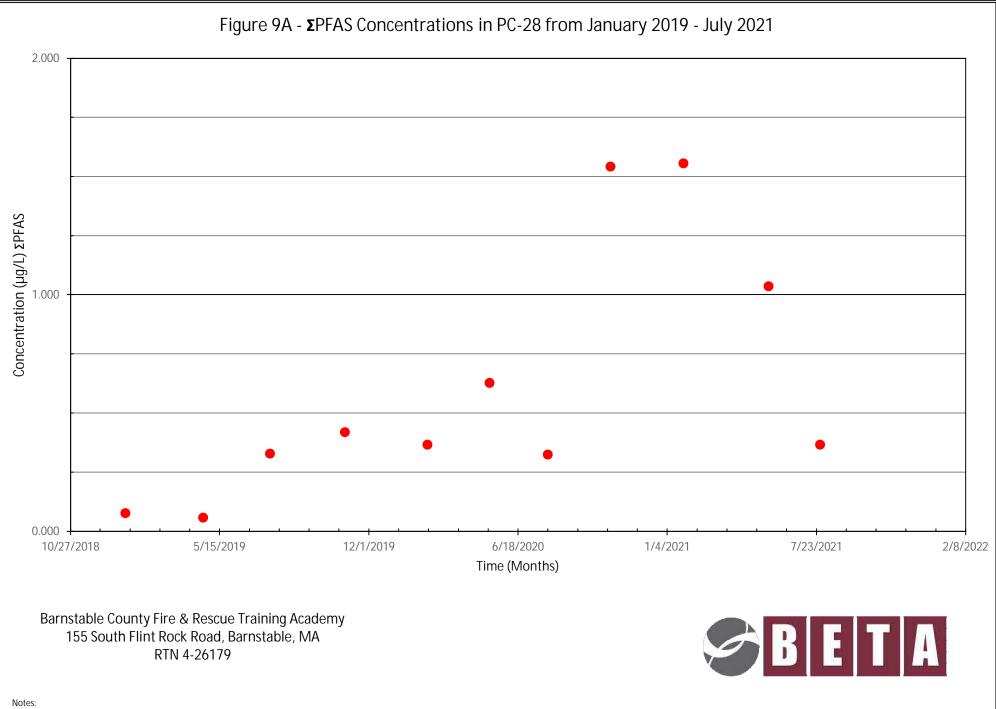

Notes:

the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, PFNA, and PFDA.

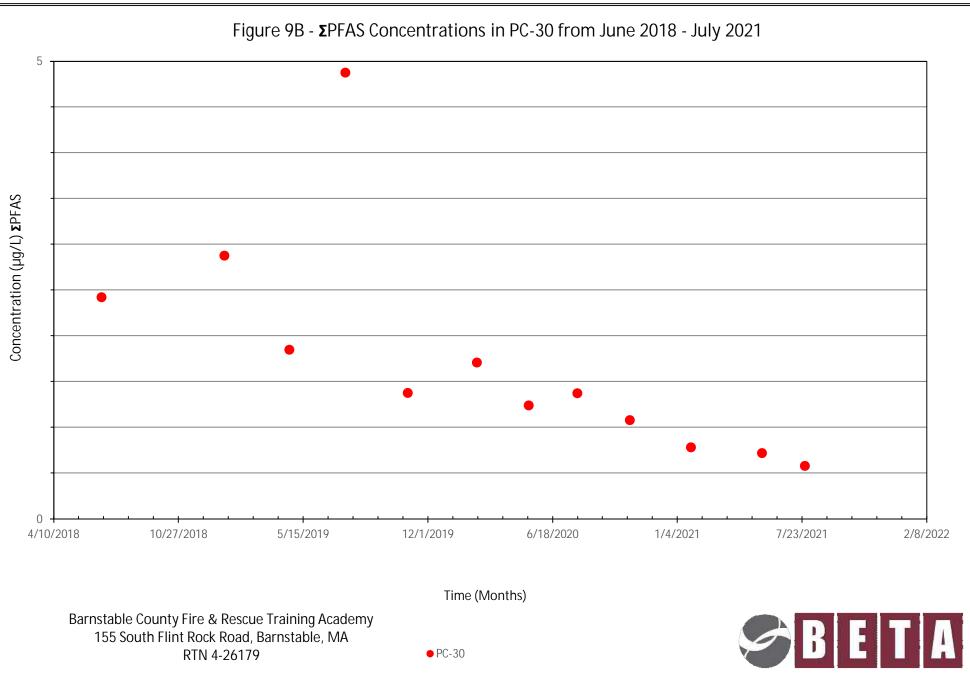

Notes:

1. Concentrations depicted represent the sum of the the five (5) PFAS compounds, PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to October 2019 represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to October 2019 represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to October 2019 represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to October 2019 represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to October 2019 represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to October 2019 represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, PFNA, and PFDA.

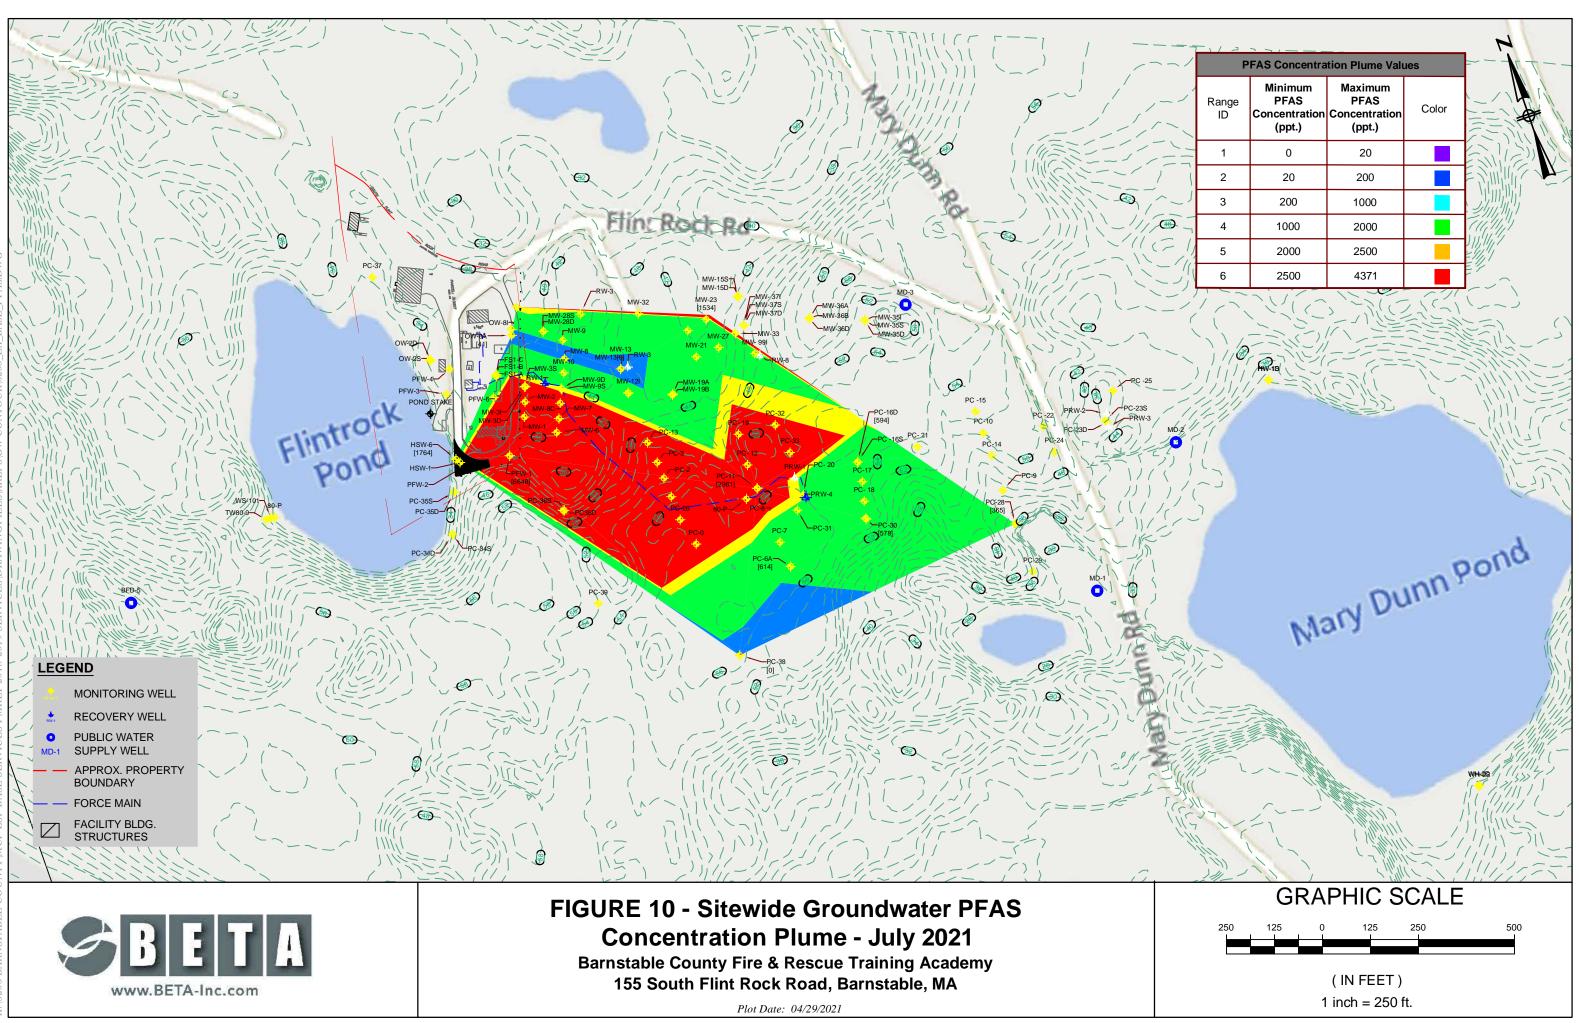

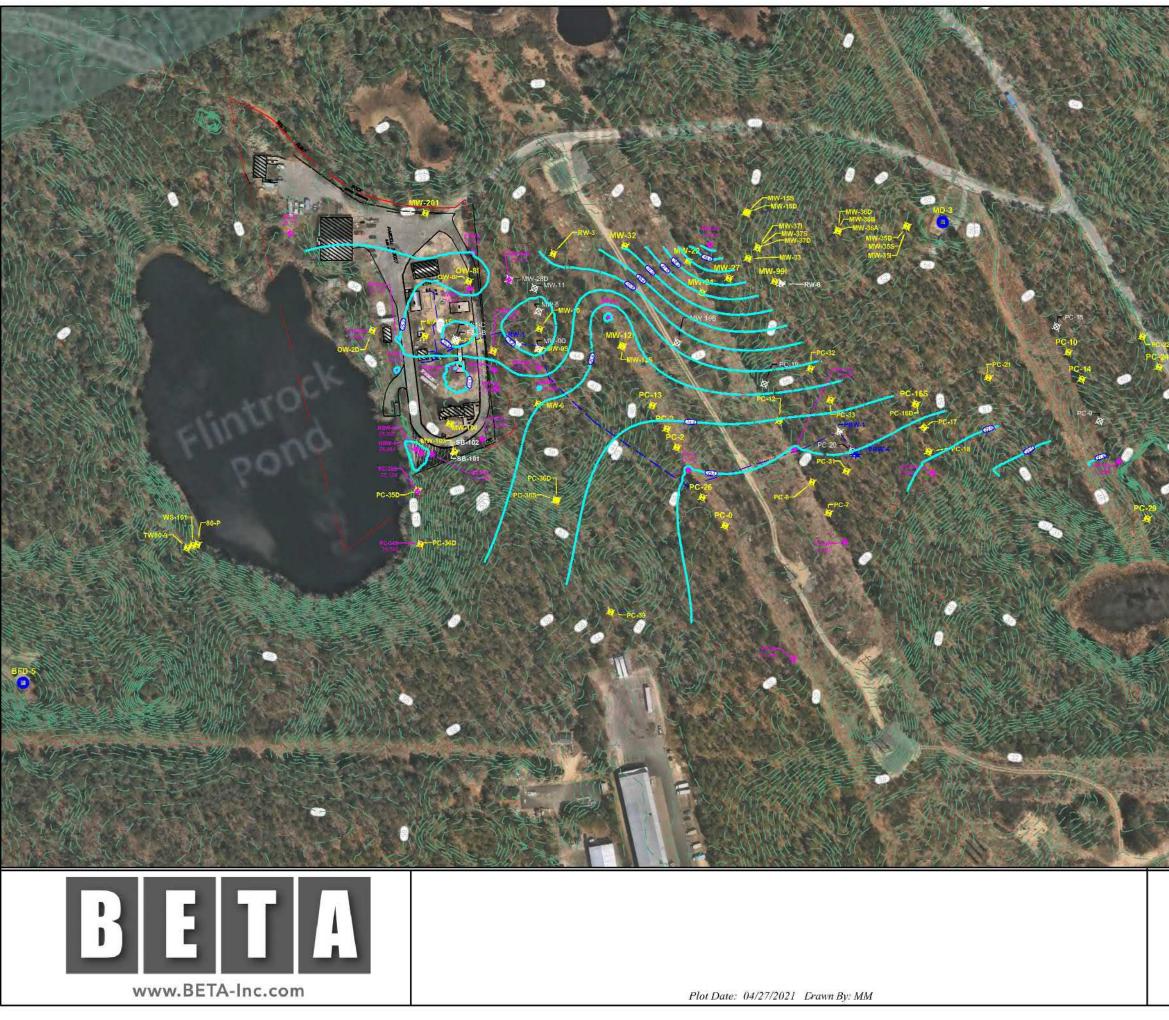

1. Concentrations depicted represent the sum of the the five (5) PFAS compounds, PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to October 2019 represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to October 2019 represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to October 2019 represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to October 2019 represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to October 2019 represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to October 2019 represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to October 2019 represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to October 2019 represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to October 2019 represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHpA, PFHxS, and PFNA from June 2018 to April 2019. Concentrations depicted from April 2019 to October 2019 represent the sum of the six (6) PFAS compounds PFOS, PFOA, PFHyA, PFHxS, and PFNA from June 2018 to April 2019. ## APPENDIX A

BWSC Transmittal Form (Unsigned)

	<b>Massachusetts Department of Environmental Protection</b> <i>Bureau of Waste Site Cleanup</i>	<b>BWSC 105</b>
		Release Tracking Number
	<b>Immediate Response Action (IRA) Transmittal Form</b> Pursuant to 310 CMR 40.0424 - 40.0427 (Subpart D)	4 - 26179
A. SITE LOCAT	ION:	
1. Release Name/L	ocation Aid: BARNSTABLE COUNTY FIRE TRAINING ACADEMY	
2. Street Address:	155 SOUTH FLINT ROCK ROAD	
3. City/Town:	BARNSTABLE 4. Zip Code: 0	26300000
5. Check here i	if this location is Adequately Regulated, pursuant to 310 CMR 40.0110-0114.	
a. CERCL	A 🗌 b. HSWA Corrective Action 🗌 c. Solid Waste Management	
🗌 d. RCRA	State Program (21C Facilities)	
	IS BEING USED TO: (check all that apply) ate of Initial IRA Written Plan (if previously submitted): 9/26/2016	
2. Submit an I	nitial IRA Plan.	
🔲 3. Submit a <b>M</b> o	dified IRA Plan of a previously submitted written IRA Plan.	
🔲 4. Submit an In	nminent Hazard Evaluation. (check one)	
🗌 a. An Imm	inent Hazard exists in connection with this Release or Threat of Release.	
🗆 b. An Imm	inent Hazard does not exist in connection with this Release or Threat of Release.	
	nown whether an Imminent Hazard exists in connection with this Release or Threat be undertaken.	of Release, and further assessment
	nown whether an Imminent Hazard exists in connection with this Release or Threat nose conditions that could pose an Imminent Hazard.	of Release. However, response actions
5. Submit a rec	quest to Terminate an Active Remedial System or Response Action(s) Taken to Add	dress an Imminent Hazard.
🔽 6. Submit an 🛙	RA Status Report	
7. Submit a <b>Re</b>	medial Monitoring Report. (This report can only be submitted through eDEP.)	
a. Type of Rep	port: (check one) 🗌 i. Initial Report 🔽 ii. Interim Report 🗌 iii.	Final Report
b. Frequency of	of Submittal: (check all that apply)	
🗹 i. A Remed	ial Monitoring Report(s) submitted monthly to address an Imminent Hazard.	
🗌 ii. A Reme	dial Monitoring Report(s) submitted monthly to address a Condition of Substantial l	Release Migration.
🗌 iii. A Reme	edial Monitoring Report(s) submitted every six months, concurrent with an IRA State	us Report.
🗌 iv. A Reme	edial Monitoring Report(s) submitted annually, concurrent with an IRA Status Repor	t.
c. Number of	Remedial Systems and/or Monitoring Programs: 2	
	VSC105A, IRA Remedial Monitoring Report, must be filled out for each Remedial Statistics transmittal form.	ystem and/or Monitoring Program

### E. LSP SIGNATURE AND STAMP:

I attest under the pains and penalties of perjury that I have personally examined and am familiar with this transmittal form, including any and all documents accompanying this submittal. In my professional opinion and judgment based upon application of (i) the standard of care in 309 CMR 4.02(1), (ii) the applicable provisions of 309 CMR 4.02(2) and (3), and 309 CMR 4.03(2), and (iii) the provisions of 309 CMR 4.03(3), to the best of my knowledge, information and belief,

> if Section B of this form indicates that an **Immediate Response Action Plan** is being submitted, the response action(s) that is(are) the subject of this submittal (i) has (have) been developed in accordance with the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000, (ii) is(are) appropriate and reasonable to accomplish thepurposes of such response action(s) as set forth in the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000 and (iii) complies(y) with the identified provisions of all orders, permits, and approvals identified in this submittal;

> if Section B of this form indicates that an **Imminent Hazard Evaluation** is being submitted, this Imminent Hazard Evaluation was developed in accordance with the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000, and the assessment activity(ies) undertaken to support this Imminent Hazard Evaluation comply(ies) with the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000;

> if Section B of this form indicates that an Immediate Response Action Status Report and/or a Remedial Monitoring Report is(are) being submitted, the response action(s) that is (are) the subject of this submittal (i) is (are) being implemented in accordance with the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000,(ii) is (are) appropriate and reasonable to accomplish the purposes of such response action(s) as set forth in the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000,(ii) is (are) appropriate and 310 CMR 40.0000 and (iii) comply(ies) with the identified provisions of all orders, permits, and approvals identified in this submittal;

> if Section B of this form indicates that an Immediate Response Action Completion Statement or a request to Terminate an Active Remedial System or Response Action(s) Taken to Address an Imminent Hazard is being submitted, the response action(s) that is(are) the subject of this submittal (i) has (have) been developed and implemented in accordance with the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000, (ii) is(are) appropriate and reasonable to accomplish the purposes of such response action(s) as set forth in the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000 and (iii) comply(ies) with the identified provisions of all orders, permits, and approvals identified in this submittal.

I am aware that significant penalties may result, including, but not limited to, possible fines and imprisonment, if I submit information which I know to be false, inaccurate or materially incomplete.

4. Any Other Person Undertaking Response Actions:       Specify Relationship:
H. REQUIRED ATTACHMENT AND SUBMITTALS:
1. Check here if any Remediation Waste, generated as a result of this IRA, will be stored, treated, managed, recycled or reused at the site following submission of the IRA Completion Statement. If this box is checked, you must submit one of the following plans, along with the appropriate transmittal form.
a. A Release Abatement Measure (RAM) Plan (BWSC106)
2. Check here if the Response Action(s) on which this opinion is based, if any, are (were) subject to any order(s), permit(s) and/or approval(s) issued by MassDEP or EPA. If the box is checked, you MUST attach a statement identifying the applicable provisions thereof.

- 3. Check here to certify that the Chief Municipal Officer and the Local Boardof Health were notified of the implementation of an Immediate Response Action taken to control, prevent, abate or eliminate an Imminent Hazard.
- 4. Check here to certify that the Chief Municipal Officer and the Local Boardof Health were notified of the submittal of a Completion Statement for an Immediate Response Action taken to control, prevent, abate or eliminate an Imminent Hazard.
- 5. Check here if any non-updatable information provided on this form is incorrect, e.g. Release Address/Location Aid. Send corrections to BWSC.eDEP@state.ma.us.
- 6. Check here to certify that the LSP Opinion containing the material facts, data, and other information is attached.

#### Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) Per- and polyfluoroalkyl substances (PFAS) identified as surrogates on the certificate of analysis represent the extracted internal standard.

## **CERTIFICATE OF ANALYSIS**

BV LABS JOB #: C1L0060 Received: 2021/07/27, 13:07

Encryption Key

Please direct all questions regarding this Certificate of Analysis to your Project Manager. Lori Dufour, Project Manager Email: Lori.Dufour@bureauveritas.com Phone# (905) 817-5700

BV Labs has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per ISO/IEC 17025, signing the reports. For Service Group specific validation please refer to the Validation Signature Page.

### **GENERAL COMMENTS**

Sample QFD044 [INFLUENT PRW-4] : Per- and polyfluoroalkyl substances (PFAS): Due to high concentrations of the target analytes, sample required dilution. Detection limits were adjusted accordingly.

Sample QFD047 [SYSTEM#2 MIDPOINT] : Per- and polyfluoroalkyl substances (PFAS): Due to high concentrations of the target analytes, sample required dilution. Detection limits were adjusted accordingly.

Results relate only to the items tested.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

#### VALIDATION SIGNATURE PAGE

The analytical data and all QC contained in this report were reviewed and validated by:

Colm McNamara, Senior Analyst, Liquid Chromatography

BV Labs has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per ISO/IEC 17025, signing the reports. For Service Group specific validation please refer to the Validation Signature Page.

#### Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) Per- and polyfluoroalkyl substances (PFAS) identified as surrogates on the certificate of analysis represent the extracted internal standard.

N/A = Not Applicable

(1) Extracted internal standard analyte recovery was below the defined lower control limit (LCL). Laboratory spiked water resulted in satisfactory recovery of the extracted internal standard analyte. When considered together, these QC data suggest that matrix interferences may be increasing the variability of the associated native analyte result (PFTeDA, PFTrDA).

PFAS	in water by SPE/LCM	٨S	LCMS	7516843	2021/08/12	2021/08/15	Lovelpreet	Thind	

#### **GENERAL COMMENTS**

Sample QGQ133 [PC-11] : Per- and polyfluoroalkyl substances (PFAS): Due to high concentrations of the target analytes, a reduced sample volume was extracted and analyzed. Detection limits were adjusted accordingly.

Sample QGQ136 [PFW-1] : Per- and polyfluoroalkyl substances (PFAS): Due to high concentrations of the target analytes, a reduced sample volume was extracted and analyzed. Detection limits were adjusted accordingly.

Sample QGQ137 [DUPLICATE-1] : Per- and polyfluoroalkyl substances (PFAS): Due to high concentrations of the target analytes, a reduced sample volume was extracted and analyzed. Detection limits were adjusted accordingly.

Sample QGQ138 [HSW-6] : Per- and polyfluoroalkyl substances (PFAS): Due to high concentrations of the target analytes, a reduced sample volume was extracted and analyzed. Detection limits were adjusted accordingly.

Results relate only to the items tested.

RE: Immediate Response Action Status and Remedial Monitoring Report #56 Barnstable County Fire and Rescue Training Academy 155 South Flint Rock Road Barnstable, Massachusetts DEP Release Tracking No. 4-26179 Project File #6206

Dear Mr. Ells,

As required by the Massachusetts Contingency Plan (MCP) 310 CMR 40.1403(3)(e) and 40.1403(6), BETA Group, Inc.(BETA) is notifying you on behalf of our client, Barnstable County, that an Immediate Response Action (IRA) Status and Remedial Monitoring Report (RMR) No. 56 is being submitted to the Massachusetts Department of Environmental Protection – Bureau of Waste Site Cleanup (MassDEP – BWSC) for the release site referenced as the Barnstable County Fire and Rescue Training Academy (BCFRTA) located at 155 South Flint Rock Road in Barnstable, Massachusetts (the site). This Report summarizes the IRA activities that occurred during the July 2021 monthly reporting period.

Pursuant to the Massachusetts Contingency Plan (310 CMR 40.0480), an Initial Site Investigation has been performed at the site. A release of oils and/or hazardous materials has occurred at the site. In August 2016, MassDEP Southeast Regional Office issued a Notice of Responsibility (NOR) to Barnstable County, as current owner and operator of the Barnstable County Fire and Rescue Training Academy (BCFRTA), that the detection of elevated concentrations of poly- and perfluorylalkyl substances (PFAS) in groundwater at the site constituted a release under the MCP. MassDEP issued Release Tracking Number (RTN) 4-26179 to this release. As summarized in the NOR, based on the detected PFAS concentrations in soil and groundwater at the BCFRTA and the inferred groundwater flow, MassDEP determined that the releases of PFAS from the use of aqueous film-forming foam (AFFF) at the BCFRTA is a source of PFAS detected in the Mary Dunn public water supply wells.

During the July 2021 reporting period, the two treatment systems, GWTS #1 and GWTS #2, were in operation for all or portions of the month of July. GWTS#1 was in operation for approximately 27 days and GWTS#2 was in operation for approximately 21 days. A carbon changeout occurred on July 6, 2021. The overall (average) system flow rate and gallons of groundwater treated are based on the available Effluent flow totalizer readings for both systems. For the reporting period from July 1 to July 30, 2021 both systems treated an approximate combined 0.95 million gallons of groundwater from the downgradient recovery well PRW-4 at an average, total (of the two systems) effluent flow rate of 27.1 gpm. Based on 0.95 million gallons treated, approximately 0.002 kilograms of PFAS were estimated to have been removed from the groundwater during this July 2021 reporting period.

BETA Group Inc. 701 George Washington Highway, Lincoln, RI 02865 P : 401.333.2832 |F: 401.333.9225 |W: beta-inc.com At this time, IRA activities are ongoing. Continuing IRA activities will include operation and monitoring of the on--Site Groundwater Pump and Treatment Systems (GWPTS), including performance sampling of GWPTS, review and evaluation of the on-Site GWPTS operation and maintenance activities as they affect groundwater treatment, periodic groundwater monitoring, and construction of the capping and select demolition project is underway. Additional details regarding the continuing IRA activities are included in the IRA Status and RMR No. 56 report document.

The IRA Status and RMR document is available electronically via the searchable sites database of the MassGOV / MassDEP website via the following link:

https://eeaonline.eea.state.ma.us/portal#!/wastesite/4-0026179

If you have any questions or comments, please do not hesitate to contact our office.

Sincerely, BETA Group, Inc.

Par P. Theo
