

EATING SHELLFISH AS PART OF A HEALTHY DIET

Safe Seafood Series

The State of Massachusetts and its commercial shellfish harvesters go to great lengths to ensure shellfish are of the utmost quality when brought to market. Buying locally you can be assured that shellfish is harvested under strict state regulatory standards, while overseas imports are rarely inspected.

- Our local shellfish are all rated a “Best” or “Good” choice by Monterey Bay Aquarium’s Seafood Watch™
- The American Heart Association has recommended consuming fish or shellfish at least twice a week as part of a heart healthy diet, that’s 104 times a year!
- Shellfish are on the list of Weight Watchers™ “Power Foods”
- The Omega-3’s DHA and EPA found in shellfish are particularly important for brain development and prevention of heart disease.
- Worried about potential contaminants? When evaluated local shellfish had largely undetectable levels, including Mercury, making them a safe choice.

PLENTY OF HEALTHFUL LOCAL OPTIONS

- Shellfish are low in calories and total fat while high in protein and important Omega-3 fatty acids.
- 12 oysters contain fewer calories than an average beer!
- Shellfish contain lots of vitamins, trace minerals, and antioxidants.

Nutritional Profile of Shellfish from Massachusetts

Type of shellfish:		Quahog	Oyster	Mussel	Soft-shell Clams	Bay Scallops
Number in a 100g serving		10-12	6-8	14-18	12-16	8-16
Nutrition Facts	Unit	Amount Per 100g (3.5oz.) Serving (raw)
