

Electronic Nicotine Delivery Systems & Their Health Impacts

This live online training is sponsored by the Barnstable County Department of Human Services and is paid for through the MassCall3 grant from the Massachusetts Department of Public Health.

This training will focus on the impact nicotine vaping products have on individuals with a history of substance use and mental health disorders.

This population uses tobacco products at a higher rate than the general population, which amplifies health disparities.

Meanwhile, the e-cigarette landscape continues to rapidly change and evolve. Despite an increase in FDA regulations, nicotine vaping product sales grew over the past three years.

Additionally, the majority of vaping products on the market today contain even higher levels of nicotine than prior versions.

Please join us to learn about some of these newer products and examine how they are impacting the public health debate about the risks vs. the potential benefits of vaping.

We will also highlight special treatment considerations for people with behavioral health conditions who use these products and provide guidelines for using nicotine replacement therapy to quit vaping.

Register

This single-session training is being offered via Zoom, on two days. Register for the date and time that fits your schedule.

Wed.
June 21

2:30p – 4:00p
